CITY OF YAKIMA
COMMUNITY DEVELOPMENT

YAKIMA NEIGHBORHOOD HEALTH SERVICES
COMMUNITY RESOURCE SERVICE CENTER

Yakima Neighborhood Health Services ("YNHS") has proposed a Community Resource Center (with emergency warming shelter) at 201 South 6th Street, Yakima, Washington 98901 (Assessor's Parcel No. 191319-13473). The proposal is for a mixed use facility with the primary use being a community center providing resources, assistance and services to the pre-homeless and homeless populations of the immediate geographic area. Ancillary uses include an emergency warming shelter for homeless individuals. YNHS' application requested zoning review of the project proposal as a "Community Center" and "Mixed-Use Building".

In the exercise of caution, this submission will supplement the filed application and requests a contingent interpretation of the proposed use pursuant to the nonclassified use review provisions of YMC 15.04.040. The proposed definition for the contemplated use is as follows:

"Community Resource Service Center" means a mixed use facility providing programs, resources, assistance and temporary shelter to homeless and pre-homeless populations of the immediate community.

It is not the intent of this definition to establish a general use category applicable in all Small Convenience Center ("SCC") or other zoning districts. Rather, it is intended to describe the unique use proposed for this project at this location. The proposed Unclassified Use Definition is supported by the attached narrative and supporting materials.

NONCLASSIFIED USE NARRATIVE

Yakima Neighborhood Health Services. Yakima Neighborhood Health Services (YNHS) is a Washington nonprofit corporation.¹ The mission of Yakima Neighborhood Health Services is to provide affordable, accessible, quality health care, to promote learning opportunities for students of health professions, and to end homelessness and improve quality of life in our communities. YNHS has been an active participant in provision of resources and assistance to the homeless population of Yakima County. YNHS currently operates YNHS "Resource Centers" in both Yakima and Sunnyside.

Project Proposal-Location. YNHS is proposing to establish a "Community Resource Service Center" designed to provide resources and assistance to the homeless population of central and southeast Yakima. The proposed location is at the current site of Roy's Market, 201 South 6th Street, Yakima, WA 98901. (Assessor's Parcel No. 191319-13473).² The project proposal implements an integral component of this community's commitment to end homelessness and provide resources and assistance to ur homeless population.

In 2005, YNHS developed a Health Care for the Homeless program, and partnered with public and nonprofit organizations to provide resources and assistance to our area's pre-homeless and homeless populations. The community vision was implemented through the *Homeless Network of Yakima County's Ten Year Plan to End Chronic Homelessness*,³ and involves the collaborative efforts of more than 30 agencies. *Attachment A*

The primary purpose and use of the Resource Center is to provide a range of resources, services and assistance to the homeless and pre-homeless within the immediate geographic area. The services and resources provided include the following:

¹ YNHS provides 217 full-time jobs and supports an additional 84 jobs in other industries. Operations are provided on two primary campuses (Yakima and Sunnyside) as well as provision of health care services at Southeast Yakima Community Center, Central Washington Comprehensive Mental Health, Neighborhood Connections (Triumph Treatment Services), and the YNHS Depot. YNHS provides services without regard to age, race, handicap, religion, sexual orientation, national origin, or ancestry.

² The project site is a poorly maintained and underused grocery store located at 201 South 6th Street, Yakima, Washington. (Assessor Parcel No. 191319-13473). The parcel is 29,657 square feet (.68 acres) with building ground floor area of 13,748 square feet. The property is zoned Small Convenience Center and is located near public transportation and facilities.

³ The Homelessness Housing and Assistance Act (RCW 43.185C) was passed by the legislature in 2005 and required counties to develop a ten-year plan to reduce homelessness by fifty percent by 2015. *See generally Department of Commerce – Homeless Assistance and Prevention Programs (www.commerce.wa.gov)*. Yakima County formed the Homeless Network of Yakima County, a consortium of 37 providers and consumers. Homeless Network developed the required ten-year plan which was entitled Homeless Network of Yakima County Plan to Reduce Homelessness in Yakima County. The plan sought to promote coordination and linking of resources to "...build a comprehensive system to end homelessness and prevent return to homelessness and moving homeless individuals and families beyond shelter to permanent housing and self-sufficiency." Board of Yakima County Commissioners endorsed and adopted the plan by *Resolution No. 66-2005 (January 25, 2005)*. City of Yakima supported the goals and strategies expressed in the *Ten Year Plan by Proclamation Dated February 15, 2005*. Homelessness Network has proceeded to implement the plan directives and Yakima Neighborhood Health Service is an integral and central provider of services within the community system.

- Homeless Prevention Assistance
- Coordinated Entry to Transitional and Permanent Supportive Housing
- Medical Respite Care for the Homeless
- Transportation Assistance
- Self Sufficiency Help
- Resources and Referrals for Health care
- Connection to Employment and Training
- Resources for Health Insurance and Other Application Assistance
- Basic needs and Hygiene Items
- Overnight Warming Shelter and Essential Needs

YNHS currently operates two Resource Centers.⁴ This integrated resource center is an integral component of the *continuum of care* structure established by *Homeless Network Ten Year Plan*.

In order to be effective, the *continuum of care* must be integrated and coordinated so that when homeless people make contact with one agency in the system, they can be linked across agencies with the full range of housing and support services they need to stabilize their lives and maximize their self-sufficiency. Therefore, an information and referral system which provides accurate and up-to-date information about service and housing availability and which effectively links people with what they need is an absolutely essential aspect of a fully-functioning *continuum of care*.

Homeless Network Ten Year Plan – Section 4-Outreach. The information must be accessible to outreach workers, case managers, homeless people and the general public. *Id.* The outreach program is also an important mechanism for connecting people with needed services.⁵

⁴ YNHS provides comprehensive medical, dental, vision and health care services to the community, including low income, seniors, families, women and underserved populations. State and federal agencies have designated YNHS as primary care provider for a multitude of programs including primary medical care, dental services behavioral health, nutritional counseling, pharmacy services, outreach assistance, Women Infant Children (WIC), , and many others. YNHS has established and operates two Homeless Resource Centers (Yakima and Sunnyside) in partnership with the Homeless Network of Yakima County. The Resource Centers provide essential services to the homeless including referral resources to partner agencies (mental health care, chemical dependency assessment and treatment, transitional and permanent housing, etc.). The facility will be owned and operated by YNHS (a nonprofit corporation) with the principal use of facility for public assistance and community improvement. [Consider reference to definition of Community Center in footnote].

⁵ The *Ten Year Plan* summarizes the need for accessible information and implementation as follows:

This information should be assessable to outreach workers, case manager, homeless people, and the general public. In addition to an accessible information and referral system, outreach is an important mechanism for connecting people with the services they need. For many people, an outreach worker provides the first point of contact with the service system; this may be through shelter day centers, multi-service or day drop-in centers, crisis hotlines, safe havens for domestic violence victims or the homeless mentally ill, information hand-outs or mobile outreach workers who work on the street.

Provision of assistance to the homeless in our community is a collaborative effort involving over 30 agencies. YNHS administers or coordinates the provision of such services. The principal use of the facility will be for public assistance to the immediate homeless community.

An ancillary component of the Resource Center will be an overnight warming shelter with kitchen and limited food service. *Homeless Network Ten Year Plan* specifically recognizes that provision of emergency homeless services (including overnight shelter) is an integral component of the *continuum of care* service model. The project contemplates a maximum of fifty (50) beds for temporary shelter. There will be no provision for short-term or long-term residential uses at this site. YNHS provides resources for transitional and permanent housing provided by other agencies and organizations including Yakima Housing Authority.

YNHS will not provide medical, dental or other health care services at this facility. There will be limited chemical dependency treatment, mental health evaluation and treatment, or otherwise specialized care. The Resource Center will serve as a Coordinated Entry point to connect clients to services at other locations (YNHS Medical, Dental and Health care Facilities) or through partner agencies (Triumph Treatment Services, Central Washington Comprehensive Mental Health, YWCA, etc.).

Proposed Definition. Community Resource Service Center is defined as follows:

“Community Resource Service Center” means a mixed use facility providing programs, resources, assistance and temporary shelter to homeless and pre-homeless populations of the immediate community.

It is not the intent of this definition to establish a general use category applicable in all Small Convenience Center (“SCC”) or other zoning districts. Rather, it is intended to describe the unique use proposed for this project at this location.⁶ The proposed use and definition include a number of salient conditions:

1. The primary purpose of the Community Resource Service Center shall be to provide resources, services and assistance to the homeless and pre-homeless within the immediate community. The Resource Center will be provided resources with respect to housing placement (temporary, transitional and permanent), medical and healthcare referrals, transportation, mental health care and treatment referrals,

Homeless Network Ten Year Plan – Section 4. The operative concept is *engagement* which relates to the interaction, provision of information resources, and referral to participating agencies.

⁶ Urban Area Zoning Ordinance (UAZO) provides a procedure for review of “Unclassified Uses.” YMC 15.04.040. The ordinance provides:

Any use not listed in Table 4 – 1 is an unclassified use and shall be permitted only in those Districts so designated by the Hearing Examiner. Any unclassified use permitted in a particular zoning district shall be allowed only as a Class (2) or (3) use. The Hearing Examiner shall follow the provisions of YMC Chapter 15.22 when determining which zoning districts are appropriate for a particular unclassified use.

YNHS has submitted an application for Class (2) review of the project proposal as (1) a “Community Center”, and (2) a “mixed-use building”. While YNHS believes that the project proposal is permitted within the SCC Zoning District, and unclassified use determination has been requested in the exercise of caution. It has been suggested that the use is unclassified because of the combination of community center activities with a temporary warming shelter (residential) land use. It is YNHS’s position that the combined uses are incorporated in the ordinance authorization for “mixed-use building.”

chemical dependency case/care management and referrals, employment and job assistance, and treatment assistance and referrals.

2. The facility shall be staffed 24/7 and is located in an area with demonstrated need for homeless support services.

3. The facility is located within 1000 feet of a public transportation stop or hub.

4. A warming shelter is provided with a maximum of sixty (60) beds. All shelter services will be for temporary shelter and there will be no short-term or long-term residencies.

5. Site development conditions include:

- Site Screening Standard C shall be applicable to property lines adjacent to R-1 properties. YMC 15.07.040 and .050.
- YNHS proposes to provide 26 on site parking spaces. The current warming shelters report very low volumes of vehicle traffic. The high end estimate is between 6-8 cars per night for a 50 bed facility. YNHS proposes a parking standard of 1 parking space per 3 beds.
- Site plan to be reviewed and approved with compliance with applicable development conditions and mitigation.

Other conditions and/or site development standards may be established through the permit and hearing review process as well as environmental review under State Environmental Policy Act (SEPA).

Applicable Ordinance, Comprehensive Plan and Statutory Provisions.

YNHS has submitted a contemporaneous application for Class (2) use approval of the proposed project as a “Community Center” and “mixed-use building”. UAZO contemplates mixed uses on parcels with the focus being on the “use” of the property. While it is YNHS’ opinion that the project proposal is covered by existing ordinance use categories, the proposed definition is intended for use with respect to this specific project and not to be a generally applicable ordinance.

Use category YNHS is concerned that disparate treatment may be applied based on uninformed stereotypes, biases and prejudices. This application relates to services and temporary shelter for homeless individuals.⁷ The focus is on use of the land and not the identity of the users. *Phillips Supply Co. v. Cincinnati Zoning Bd. Of Appeals*, 17 NE 3rd 1 (Ohio 2014) (“this is a zoning case, generally, zoning laws may regulate the use of the land, not the identity of the users.”) Stereotypes and popular prejudices may not form the basis for zoning decisions. *Sunderland Family Treatment Services v. City of Pasco*, 127 Wn. 2d 782, 794 (1995). It is also well established that community displeasure cannot be a basis for land use decisions. *Maranatha Mining Inc. v. Peirce County*, 59 Wn. App. 795, 804 (1990).

⁷ Federal law defines a homeless person as one who “lacks a fixed, regular and adequate nighttime residence...and has a primary night residency that is: (a) a supervised publically or privately operated shelter designed to provide temporary living accommodations... (b) an institution that provides temporary residence for individuals intended to be institutionalized, or (c) a public or private place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings. 42 USC § 11301 *et. seq.* This definition is less useful in rural areas. American Planning Association, *Policy Guide on Homelessness* (2003). The homeless are not a homogeneous group but consist of two primary classifications: transitionally homeless and chronically homeless persons. *Id.* U.S. Department of Housing & Urban Development has developed a *Continuum of Care planning process*. Yakima County has adopted and implemented a multi-agency coordinated plan to address the homeless and other special needs populations. See generally, Yakima Urban Area Comprehensive Plan 2025 V-10; And *Homeless Network Ten Year Plan* (2005).

(1) Applicable UAZO Zoning Provisions.

The primary purpose of the Community Resource Service Center is to provide assistance and support to the pre-homeless and homeless populations of the immediate community. This service falls directly within the clear and unambiguous definition of "Community Center" which is as follows:

"Community Center" means a facility owned and operated by a public agency or nonprofit corporation, provided the principal use of the facility is for public assistance, community improvement, or public assembly.-
UAZO 15.02.020

Community Centers are generally permitted in every zoning district within the UAZO with the exception of Airport Support (AS), Light Industrial (M-1) and Heavy Industrial (M-2).⁸ City of Yakima and Yakima County have historically recognized homeless shelters as "Community Centers".⁹

UAZO was amended to recognize that there may be "mixed-use" facilities within commercial districts. The adopted definition is as follows:

"Mixed-Use Building" means a building in the commercial district or planned development used partly for residential use and partly a community facility or commercial use. -UAZO 15.02.020

A mixed-use building is a Class (1) Use within the SCC zoning district – as well as in the B1, B-2, LCC, GC, CD and RD zoning districts. The mixed-use building category specifically recognized that residential usage is authorized within a facility used as a *community facility*. There can be no service question that the primary use of the Resource Center is as a community facility. UAZO recognizes mixed-use and the interpretation process cannot be used to discriminate against the homeless and members of a protected class. "Public Facilities" are permitted for provision of essential public services. The proposal does not classify as a Group Home, Boarding House or Halfway House under ordinance provisions.

In evaluating nonclassified uses, the Hearing Examiner should look to the zoning ordinance for guidance on similar land uses and compatibility factors. UAZO recognizes a plethora of similar uses are authorized in the SCC zoning district including the following:

| <u>Class (1)</u> | <u>Class (2)</u> | <u>Class (3)</u> |
|------------------|------------------|--------------------|
| ➤ Daycare Center | ➤ Church | ➤ Treatment Center |

⁸ Community Centers are permitted as Class 1 uses in the GC and CBD Zones. Community Centers in Class 2 uses generally permitted in the SR, R-1, R-2, R-3, B-1, B-2, HB, SCC, LCC and Bar D Zoning Districts.

⁹ A history of ordinance interpretation is set forth in the files related to the interpretation of "Mission" in the context of applications filed by Union Gospel Mission. The "Mission" definition was applicable only to the CBD and CBDS zoning districts. *Examiner's Decision, City No. UAZO CL (2) - #10-92* (October 19, 1992). This conclusion is legal and logical – the "Mission" nonclassified use interpretation was issued in the context of a project specific quasi-judicial application and Hearing Examiner did not have authority to make legislative determinations regarding use categories for unrelated zoning districts. YNHS' use application presents a fundamentally different land use than that contemplated by the Union Gospel Mission. The proposed YNHS use is significantly smaller in scale, shelter is temporary warming facility, there is no on-sight clinics or no recycling facility, no missionary parking, no chapels or religious facilities. More importantly, the primary purpose is provision of resources and assistance together with engagement with partners and cooperating agencies and entities.

- Mixed Use Building
- Offices and Clinics
- Restaurants
- Taverns and Bars
- Community Center
- Public Facility
- Two-Family Dwelling
- Multi-Family Dwelling (0-13+)
- Temporary Hardship Unit
- Convenience Store (24-Hour)
- Motels and Hotels
- Bed and Breakfast Inn
- (Drug and Alcohol Rehabilitation) Detached Single-Family Dwelling

Bed and Breakfast uses are allowed within the SCC zoning district and are defined as a “...residential structure providing individuals with lodging and meals for not more than thirty days...” YMC 15.02.020. The focus must be on “use” and not the intended user. The proposed use is less impactful than outright permitted uses.

Yakima Urban Area Comprehensive Plan 2025 (“Plan 2025”) specifically addresses affordable housing and homeless issues. *Plan 2025* specifically comments:

As an “economically distressed” community, Yakima County has experienced a rapid increase in the numbers of homeless individuals and families as well as a number of those at risk of becoming homeless. These increases are due to above average per capita rates of unemployment, chemical dependency, mental illness, and domestic discord combined with low wages, insufficient incomes and possibly the weather.

Plan 2025 Chapter 5 – Housing. The Homeless Network is specifically identified as an association of “...emergency housing providers, service providers, community leaders and other interested persons or entities concerned about addressing the emergency, transitional and permanent housing needs of the homeless persons and families.” *Id.* *Plan 2025* then provides:

The Homeless Network is focused on reducing homelessness in Yakima County by 2014 through fundamental changes in both services to the homeless and delivery of needed services to the homeless. This goal will require the coordination of services throughout a countywide integrated system and multi-disciplinary services structure. The Homeless Network currently has a membership of over forty-five local agencies.

Id. YNHS serves as a single point of contact for service assistance and case within the context of a *continuum of care* service model. The proposed facility is designed to implement community planning with respect to provision of resources, services and emergency shelter to the homeless of the community. *Plan 2025 Goal 5.1* guides affordable housing choices and adopts the following policies:

5.1.1 Continually monitor affordable housing needs and *assist in providing locations for affordable housing as necessary to meet this need.*

5.1.2 Support and inventory potential sites for affordable housing development and redevelopment.

5.1.3 Encourage affordable housing development.

5.1.5 Encourage the provision of fair share housing opportunities *to all economic segments and mixed uses for infill developments.*

5.1.7 Encourage good faith efforts that the City of Yakima and other local governments not impose regulations that may constitute barriers to affordable housing availability, and appropriate compatible residential densities.

These goals and policies support development of emergency and transitional housing in the context of the homeless population.

(2) **American Planning Association – *Policy Guide on Homelessness.***

American Planning Association (“APA”) has published a policy guide addressing issues, planning and legal considerations relating to policies addressing homelessness. American Planning Association, *Policy Guide on Homelessness* (2003). *Attachment B.* APA recognizes the need for comprehensive planning and zoning ordinances that recognize the integrated web of services and shelter. The findings adopt the *continuum of care* planning process mandated by the U.S. Department of Housing & Urban Development. APA commented:

Further, a more coordinated approach to provide housing and services for homeless people offers a good framework for increasing communication and information sharing among key stake holders including mainstream agencies and broadens the base for financial support in the homeless assistance network. *Note: the seven components, of a full Continuum of Care, are: prevention, outreach and assessment, emergency shelter, transitional housing, permanent supportive housing, permanent affordable housing, and supportive services.*

APA Finding II.6. Homeless Network adopted this process as reflected in Municipal actions related to both *Plan 2025* and *Homeless Network Ten Year Plan*. The coordination of services is recognized as a planning component:

Coordination promotes the efficient use of public funds. The coordination of planning efforts provides a platform for addressing housing needs strategically, with an integrated vision that guides, connects, and communicates a more comprehensive effort. This effort may promote equity by offering a continuum of supportive housing options.

APA further recognizes that emergency shelters are essential components in the *continuum of care*.

Shelter should be considered a basic community service. In the wealthiest nation on earth, there is no excuse for people to parish from exposure, but it happens across the nation every day. *Short-term shelters get people off the streets and offer the opportunity to access supportive services that can help them to overcome the circumstances and barriers in their lives that prevent them from securing and maintaining permanent housing situations.* A shelter is not intended to become, nor should it be a long-term solution to

homelessness, but a humanitarian measure that in the interest of public health offers basic protection from harm.

It is recognized that the APA "...should oppose neighborhood efforts to thwart housing for the homeless and non-homeless special needs populations on the basis of prejudices and fears concerning property values. It is also recognized that Title II of the Americans With Disabilities Act ("ADA") states "no qualified individual with a disability shall, by reason of such disability, be excluded from participation in or be denied the benefits of the services, programs, or activities of a public entity, or be subjected to discrimination by any such entity." The court in *Olmstad v. L.C.*, 138 F.3d 893 recognized that regulations ban "separate but equal" approach to accommodating the disabled. Local governments can violate the Fair Housing Act if they deny a reasonable accommodation due to neighborhood fears and prejudices about the homeless and disabled persons.

BOARD OF YAKIMA COUNTY COMMISSIONERS

IN THE MATTER OF ENDORSING)
TEN-YEAR PLAN TO REDUCE)
HOMELESSNESS IN YAKIMA COUNTY)

RESOLUTION NO. 66-2005

WHEREAS, an estimated 4,500 Yakima County residents are without safe, permanent housing; and

WHEREAS, the Homeless Network of Yakima County is a consortium of 37 providers and consumers focused on reducing homelessness in Yakima County by 2014; and

WHEREAS, the Homeless Network of Yakima County believes that a community commitment to carrying out these approaches and strategies will positively impact those who are already homeless as well as those at risk of becoming homeless and by doing so the quality of life can and will be enhanced for individuals, families, and Yakima County as a whole; and

WHEREAS, the Homeless Network of Yakima County Plan to Reduce Homelessness in Yakima County by 2014 promotes coordinating and linking resources to build a comprehensive system to end homelessness and prevent return to homelessness and moving homeless individuals and families beyond shelter to permanent housing and self-sufficiency;

BE IT HEREBY RESOLVED by the Board of Yakima County Commissioners that they have read the aforementioned plan and find it to be sound and viable.

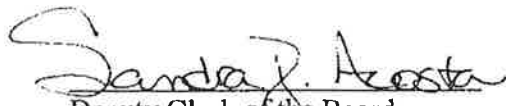

BE IT FURTHER RESOLVED that the Board endorses the plan and hereby authorizes the Clerk of the Board of County Commissioners to sign.

Done this 25th day of January 2005.

Ronald F. Gamache, Chairman

Attest: Sandra J. Acosta

Jesse S. Palacios, Commissioner

Deputy Clerk of the Board

Michael D. Leita, Commissioner
Constituting the Board of County Commissioners
for Yakima County, Washington

CITY OF YAKIMA P R O C L A M A T I O N

WHEREAS, an estimated 4,500 Yakima County residents are without safe, decent, and affordable permanent housing; and

WHEREAS, homelessness is a substantial and pervasive problem that has a powerful negative impact on our community and our citizens; and

WHEREAS, it is in the best interest of all Yakima residents to see a reduction in the level of homelessness within the City of Yakima; and

WHEREAS, the Homeless Network of Yakima County is a consortium of 37 service providers and consumers focused on reducing chronic homelessness in Yakima County by 2014; and

WHEREAS, the Homeless Network of Yakima County has a Ten Year Plan to End Chronic Homelessness in Yakima County by 2014 by coordinating and linking resources to build a comprehensive system that will 1. end chronic homelessness, and 2. prevent return to homelessness, and 3. move homeless individuals and families beyond short-term shelter to permanent housing and self-sufficiency; and

WHEREAS, the Yakima City Council and the Homeless Network of Yakima County have determined that a united community commitment to carrying out these approaches and strategies will positively impact those who are already homeless, as well as those at risk of becoming homeless, and that by doing so the quality of life of individuals and families, as well as that of the Citizens of the City of Yakima and Yakima County as a whole, can and will be enhanced

NOW THEREFORE, I, Paul P. George, Mayor of the City of Yakima, and on behalf of the City Council do hereby proclaim our support of the goals and strategies expressed in the Homeless Network of Yakima County Ten Year Plan to End Chronic Homelessness, and urge all to support their efforts insofar as they are able.

Dated this 15th day of February, 2005

Paul P. George, Mayor

"The road to homelessness ends with the commitment of the community that everyone is entitled to affordable housing."

HOMELESS NETWORK OF YAKIMA COUNTY

MISSION

The mission of the Homeless Network of Yakima County (Network) is to advocate for the homeless people of Yakima County in order to improve the quality of life, increase public awareness of issues of homelessness, impact public policy, and to prevent and end homelessness.

VISION

The Homeless Network will focus on realizable strategies to move homeless individuals and families beyond shelter to permanent housing and self-sufficiency by looking at a comprehensive range of needs and develop the local capacity to meet these needs. The Network will identify ways of coordinating and linking resources to avoid duplication by involving agencies and individuals currently involved with homeless and involve stakeholders outside of the traditional homeless system with a shared goal of building a comprehensive system to end homelessness and prevent return to homelessness.

OPERATING PRINCIPLES

The *Homeless Network* is an association of emergency housing providers, service providers, community leaders, and any other interested person or entity who are concerned about addressing the emergency, transitional and permanent needs of the homeless. The purpose of the Network is:

1. Provide a place to share ideas, concerns and resources applicable to homeless issues and foster collaboration in addressing needs of the homeless.
2. Increase community awareness related to the causes of homelessness, the needs of homeless people and ways to end homelessness through a program of public education and advocacy.
3. Participate in developing and supporting public policy to assist homeless people and work toward ending homelessness.
4. Research and develop resources to support Network and Continuum of Care projects.
5. Develop, implement and annually review county-wide plans to end homelessness.

HOMELESS NETWORK OF YAKIMA COUNTY

PLANNING

This ten-year plan to end homelessness in Yakima County by 2015 is the end result of a communitywide concern at the growing number of those at risk of becoming homeless as well as actual homeless individuals and families in the county. Towards the goal of ending homelessness, a coalition of over 40 local homeless service providers and involved individuals formed the Homeless Network of Yakima County (Network). Members include:

| | |
|--------------------------------------|---------------------------------------|
| Mental health providers | Correctional representatives |
| Local government representatives | Funders |
| Health care providers | Housing finance services |
| Affordable housing providers | Child abuse/neglect service providers |
| Shelter providers | Foster care services providers |
| Substance abuse providers | Community developers |
| Domestic violence services providers | Veterans services providers |
| Homeless individuals | Legal services providers |

As part of the planning process the Network conducted "Point in Time" homeless counts which have provided base-line measurement data on the homeless population. The "Point in Time" data has been used to identify areas of emphasis. Based on these areas, the Network established the following four objectives:

- Reduce the number of homeless families
- Reduce the number of non-chronically homeless individuals
- Reduce the number of chronically homeless individuals
- Reduce the number of homeless youth

Under each of these four objectives the *Homeless Network* has established four strategies:

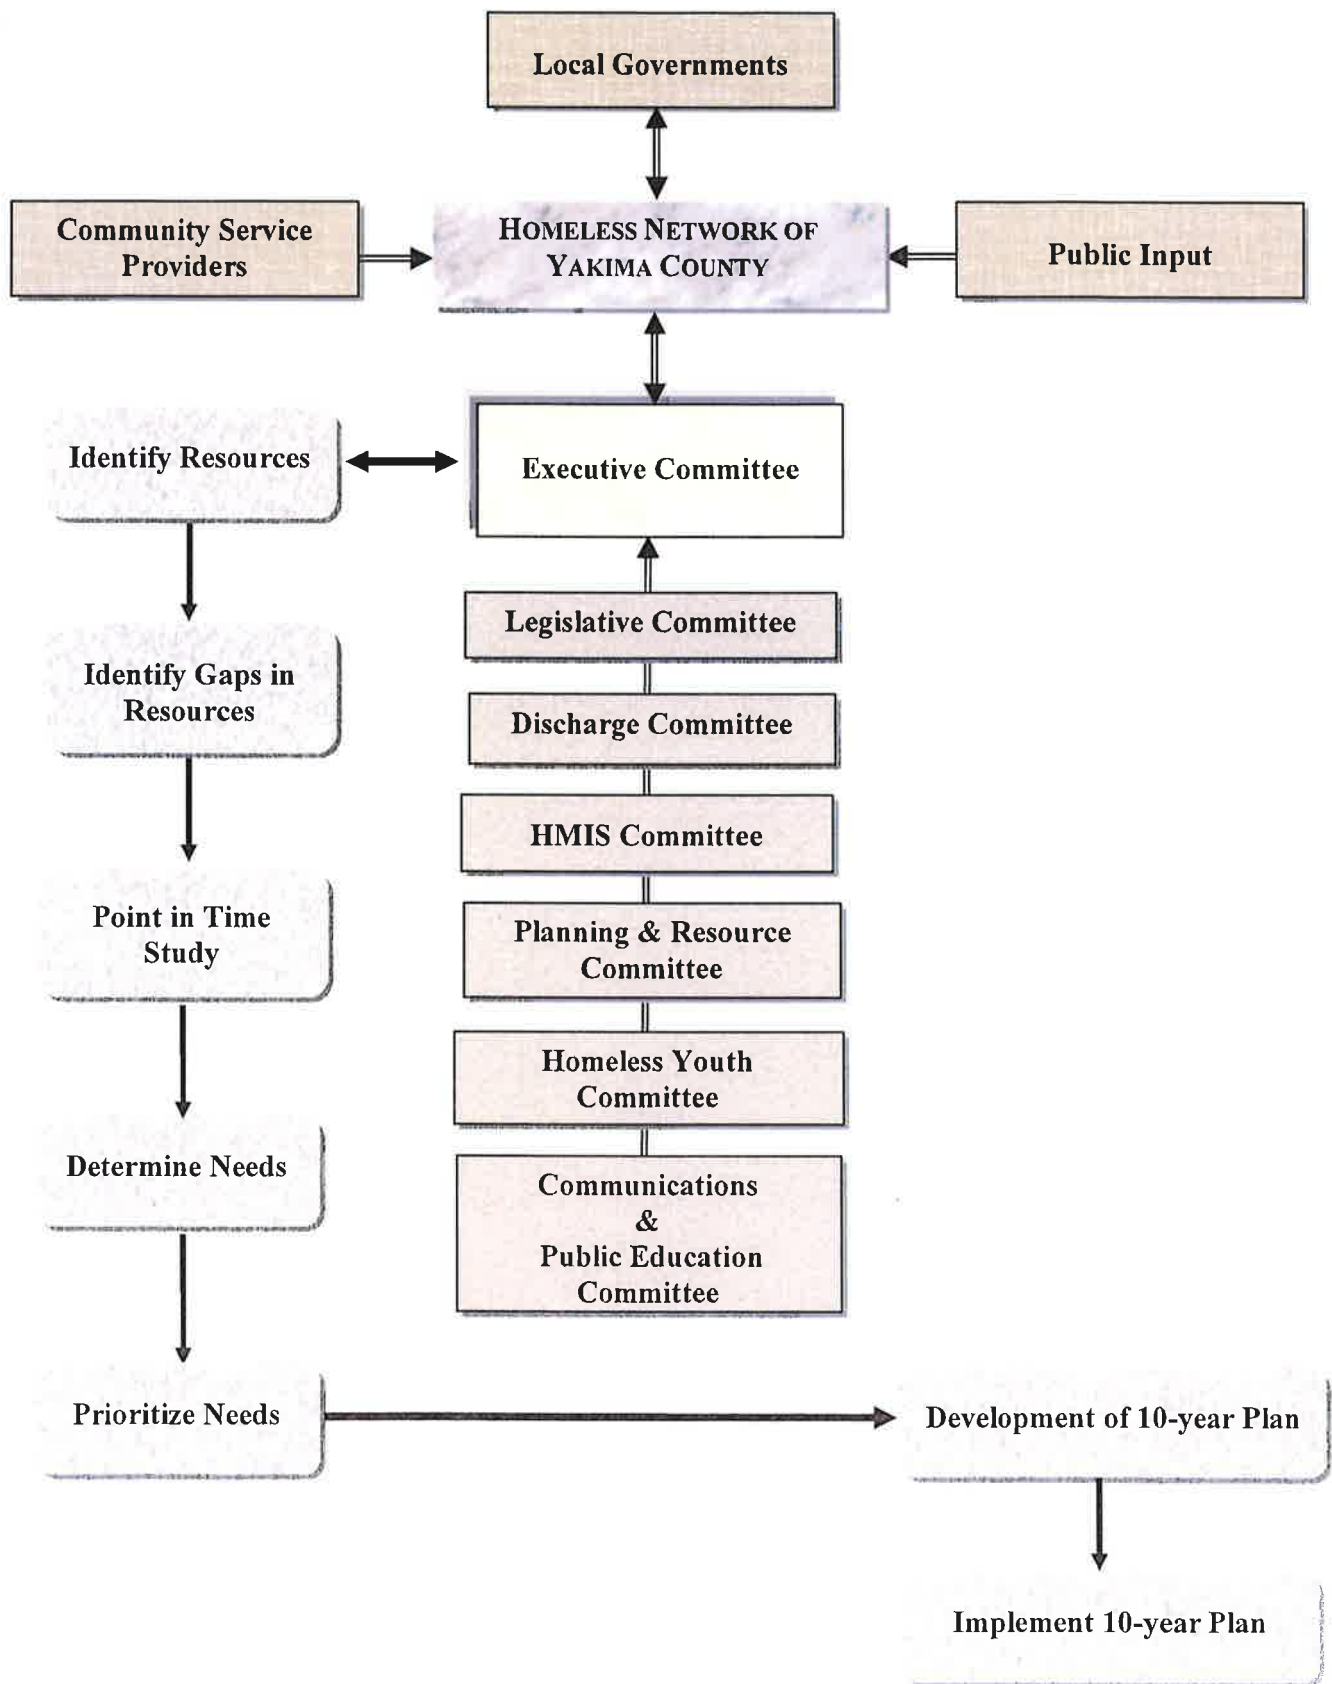

- Housing
- Prevention
- Income
- Health

To address each of the four objectives and strategies under the 10-year plan the Network has identified several activities both long-term and short-term that can be implemented to achieve the goal of reducing homelessness in Yakima County.

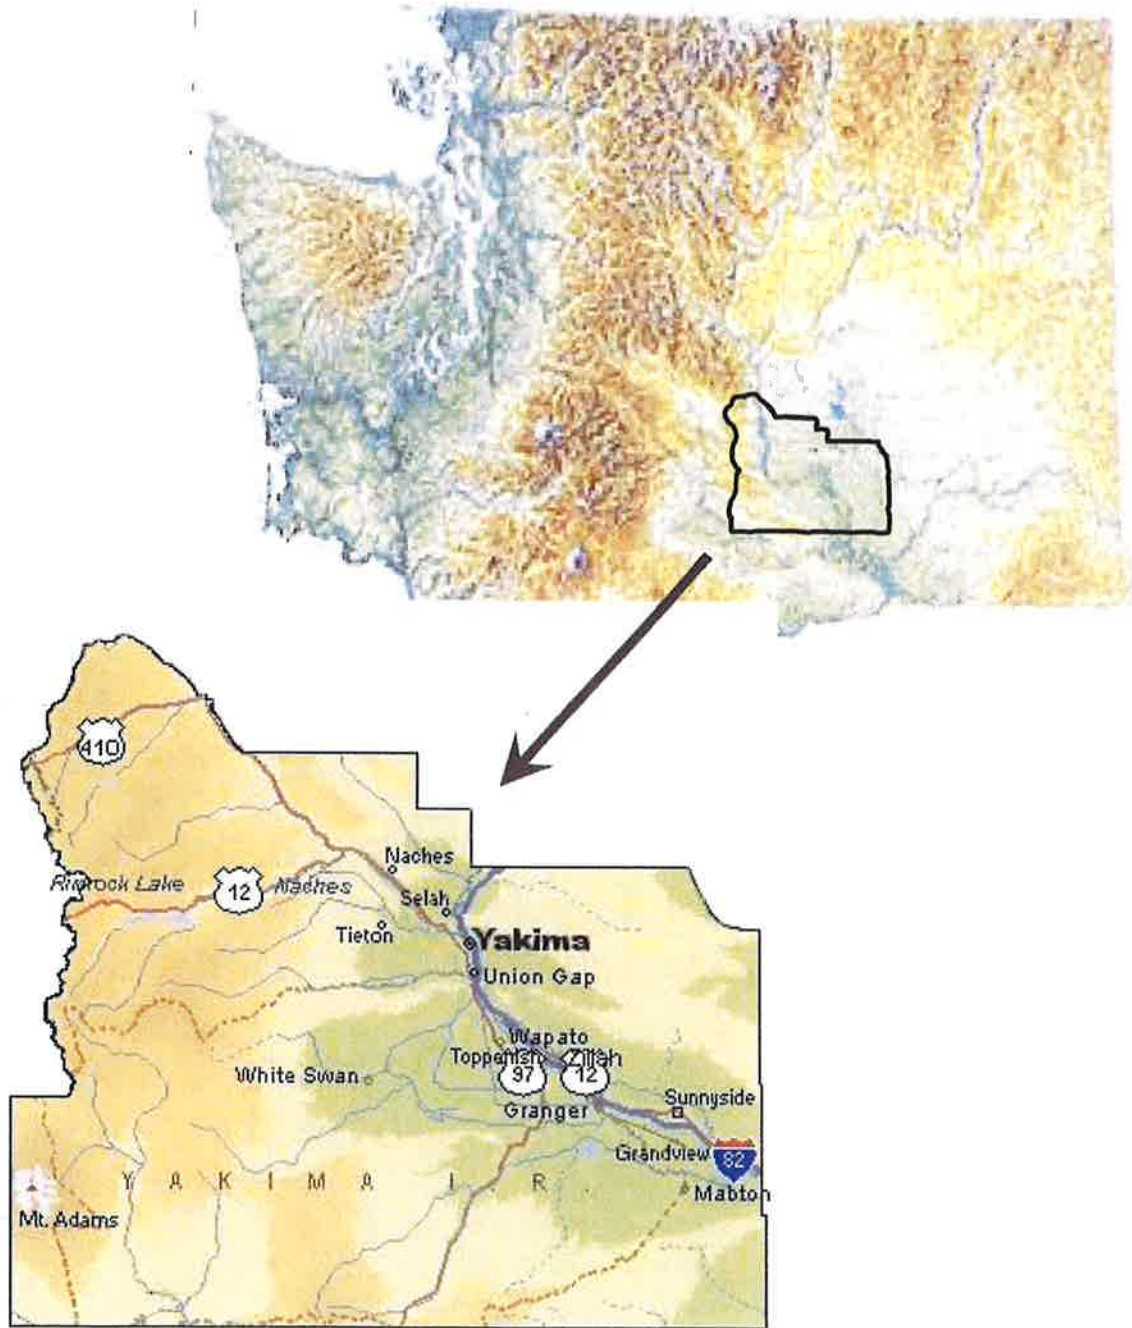

This *continuum of care* approach will streamline the current system so homeless people can move back into society through a coordinated housing and service system that addresses all of their immediate needs.

The *Homeless Network* believes that a community commitment to carrying out these approaches and strategies will positively impact those who are already homeless as well as those at risk of becoming homeless. By doing so the quality of life can and will be enhanced for individuals, families, and Yakima County as a whole.

HOMELESS NETWORK OF YAKIMA COUNTY

Yakima County, Washington

YAKIMA COUNTY

COUNTY OVERVIEW

Yakima County is the state's second largest county in terms of square miles (4,296 miles) and has the seventh largest population (226,727). It is unique in the State in having the largest concentration of minority populations in the state; over 50 percent of Yakima County's population is individuals of Hispanic background. According to the Office of Financial Management, one-half of the entire state's Native American population lives in the County. Yakima County is also home to the largest population of migrant and seasonal farm workers in the State. According to the Washington Migrant and Seasonal Farm Workers (MSFW) Enumeration Study for Washington State, there are 81,175 migrant and seasonal farm workers, including family members, temporarily resident in Yakima County.

The area's economic basis – agriculture and service industries – employs over 60 percent of the working population. Work in these sectors is traditionally low paying, is subject to seasonal employment, and offers little or no opportunities for upward advancement. Full-time occupations that pay more than minimum wage account for less than 13 percent of the work force.

Yakima County has been designated an "economically distressed" county by the Washington State Legislature due to the county's chronically depressed economy. Only 22 percent of the land surface is taxable because of a Federal Military Training Center and the Yakama Indian Reservation. Despite the injection of millions of State and Federal dollars in the form of employment and training programs annually for the past 20 years, the county continues to experience severe economic hardships. Nearly 40 percent of the county's population over the age of 16 is not in the work force. Chronic unemployment in the county – which averages between 9 – 11 percent annually - continues to be twice the state average.

POPULATIONS AT RISK

Unemployment, low wages, chemical dependency, mental illness and insufficient income are established precursors to homelessness. On this basis, all available indicators show that Yakima County has the potential of having a large pool of individuals and families who are at risk of becoming homeless.

Living In Poverty -

Nearly a quarter of Yakima County's population live at or below poverty level. Even among those not in poverty, 42 percent are forced to seek some form of public assistance some time during the year. This is due, in part, to the County's median household income; Yakima County ranks 24th among the state's 39 counties with an annual median household income of \$39,022; almost 25 percent below the state average of \$51,794. The number of individuals visiting area food banks per 1,000 population in Yakima County is 80 percent greater than the state average (1,897 versus 1,051). Similarly, families receiving Temporary

YAKIMA COUNTY

Assistance for Needy Families (TANF) is 123.65 per 1,000 in Yakima County compared with the state average of 63.92.

Chemical Dependency - Among youth aged 10-17, 23.7 per 1,000 are clients of state-funded chemical dependency programs; this exceeds the state average of 11.09. Among adults this rate is 23.11 per 1,000 compared with the state average of 11.83.

Mental Illness - The Washington State Mental Health Division calculates there are in excess of 7,000 Seriously Mentally Ill (SMI) individuals in Yakima County. Of this population 160 have been identified as homeless.

CONDITIONS FOR HOMELESSNESS

A shortage of affordable housing plays a significant role in homelessness. Less than 1 percent of all housing in the County has been built over the past 10 years despite a population increase of 5 percent. There are 358 housing units available per 1,000 population which is 20 percent lower than the state average. The current homeownership rate in Yakima County is 62.8 percent. Of the available housing units in the County 36 percent are renter occupied units with an average vacancy rate of only 5.5 percent. As a result, housing in the County is in short supply. The lack of housing is most pronounced outside of the county's urban areas. In townships such as Parker and Outlook no new homes have been built in nearly 20 years.

This shortage of available housing has put a premium on what housing is available. The average price per home is \$125,700 which represents an increase of 33.7 percent over the past ten years. The average monthly rent for a two bedroom home is \$596. It requires a median income family to pay over half (55%) of their available income to rent a two bedroom home. Nearly 36 percent of renter occupied households in Yakima County spend 30 percent or more of their available income on rent. As a result, many families live in substandard homes or share a residence with other families. Others, however, become homeless. In Yakima County there are over 450 individuals in emergency or transitional shelters.

The need for a community wide approach to reducing homeless is demonstrated by a Point-in-Time survey of Yakima County's homeless population conducted in January 2006. In this survey 1,190 individuals and 801 households were identified as being homeless. 355 were identified as children age 0-17, 800 were between the ages of 18-64, 90 individuals reported that they were either living on the streets or in a car, 92 reported being homeless more than one year. Reasons included 213 unable to pay rent or mortgage, 187 lack of job skills, 175 drug or alcohol use, 147 mental illness, 143 job loss.

SECTION 1 – EMERGENCY SERVICES

In most instances **emergency services** are the first point of contact between those at risk of becoming homeless or who are already homeless, and a community's social service network. Emergency services by themselves, however, can do little more than alleviate a crisis or emergency situation. Instead, they must be part of a broader scheme to address homelessness.

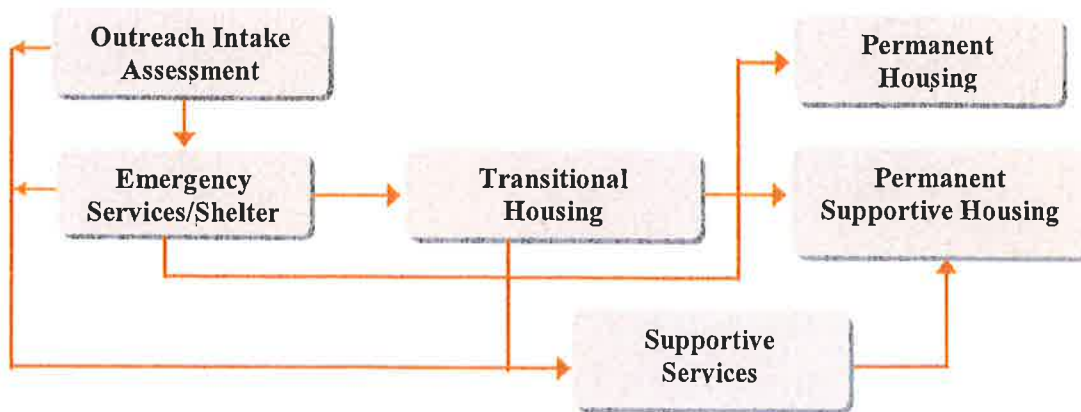

The experience of homeless providers across the country over the past ten years has demonstrated that the most effective in terms of resource use and efficient means of providing homeless emergency services is within the context of a comprehensive *continuum of care* service model. The effectiveness of this model has been described by the Department of Housing and Urban Development (HUD) as a new tool "for addressing the problem of homelessness" and incorporated into the McKinney Act.

A MODEL FOR SUCCESS

HUD has identified the fundamental components of a comprehensive *continuum of care* system to be:

- ◆ Outreach, intake, and assessment to identify an individual's or family's service and housing needs, and link them to appropriate housing and/or service resource
- ◆ Emergency shelter and safe, decent alternatives to the streets
- ◆ Transitional housing with supportive services to help people develop the skills necessary for permanent housing
- ◆ Permanent housing and permanent supportive housing

COMPONENTS OF A CONTINUUM OF CARE HOMELESS SYSTEM

SECTION 1 – EMERGENCY SERVICES

“Homelessness is a large, complicated problem that can be addressed and ended only through a comprehensive, multi-faceted approach...”

– HNYC Member

An effective “continuum of care” system - including emergency services - is coordinated. It not only includes the fundamental components identified by HUD, but also the necessary linkages and referral mechanisms among these components to facilitate the movement of individual and families toward permanent housing and self-sufficiency. It balances available capacity in each of its key components and provides a framework that is both dynamic and responsive to changing needs over time.

In using a “continuum of care” model to address homelessness, emergency services are a critical element of each stage in the continuum process. Too often emergency services are viewed as an end in themselves – once emergency services have alleviated a particular situation there is no longer a “crisis” and there is no need for emergency services to be continued. This is not to say, however, that the conditions that fostered the crisis have been resolved, or that a similar crisis will not occur at some later point in time.

Three characteristics must be present in order for emergency services - including emergency shelters – to be effective in this continuum. First, emergency services must be

“You can not just turn your head to the homeless and pretend they aren’t there. They need the focus of the entire community.”

– HNYC Member

coordinated and integrated with all other homeless services in the continuum. This requires that emergency service providers share resources, not duplicate them. Secondly, the transition from one service to another needs to be seamless and have minimal barriers. This will ensure that a person or family in need of a specific service will not “fall through the gaps.” The third and final characteristic is that emergency services – including emergency shelters – must be readily available and assessable by the individual and family in need, and by the “continuum of care” service providers.

In this methodology case management plays a multi-faceted role. It is the primary means of linking the individual/family in need of services with those services through outreach. It provides continuity to the individual/family throughout the continuum of care process.

During this process case managers act as a single point of contact for accessing services across the multitude of services providers. In this role case managers help prevent the duplicated of services as well as identifying resources to fill potential gaps in the service continuum.

Did You Know ...

Annually, the Emergency Shelter Assistance Program in Yakima County:

- Serves over 2,000 individuals
- 700 households
- Provides 22,000 bed nights

SECTION 1 – EMERGENCY SERVICES

HOMELESS SERVICES IN YAKIMA COUNTY

ISSUE:

Lack of coordination and funding among emergency service providers results in duplicate services and gaps in services

There is currently only one health care provider in Yakima County that specifically targets the homeless. The county is fortunate, however, to have a number of emergency services available to the homeless. Four hospitals – two in Yakima, one in Toppenish, and one in Sunnyside – offer emergency medical care. The countywide County Designed Mental Health Professional (CDMHP) system provides substance abuse or mental health intervention on a crisis basis. Two toll-free bilingual crisis lines provide information about, and make referrals to, critical services available to any caller around the clock. Numerous food and clothing banks are scattered across the county. A family crisis program in Yakima covers the county north of the City of Union Gap; another family crisis program in Sunnyside serves families in need south of the City of Union Gap. Both the Yakima and Sunnyside programs have a limited capability of providing temporary emergency/crisis housing to victims of

domestic violence and connecting the victims with other services (i.e. counseling, medical care, etc.) Normally, crisis housing for domestic violence victims ranges from three days to a week. During this time the individual or family's needs are assessed and longer-term housing is arranged is necessary.

There are two types of emergency shelter programs for the homeless available in Yakima County. The first type is the "facility based shelter". There are currently three facilities available to any individual/family needing shelter in the county, all of which are located in the City of Yakima. These shelters can accommodate 96 single adults and 166 families for various lengths of time, depending on the provider. The second type of shelter program is the "motel voucher" system. There are five voucher programs in the county; two in Yakima, one in Grandview, one in Toppenish, and one in Sunnyside

Very limited emergency shelter is available to several specialized homeless populations. The Projects for Assistance in Transition for Homeless (PATH) has four crisis beds available for those with mental health problems. The homeless veterans' shelter can provide 12 beds. Other underserved homeless populations include individuals/families participating in substance abuse treatment, individuals with HIV/AIDS, substance abusers who are not in treatment, and homeless youth.

CHALLENGE:

Create a coordinated emergency services system that will be adequate to meet the needs of homeless persons in crisis

All shelter programs in Yakima County provide information and referrals when they are unable to assist a homeless individual or family. Providers in upper county report a shortfall of 170 shelter placements a week; in the lower county approximately 60 requests for emergency shelter go unmet weekly.

There is currently a limited countywide network to share information among emergency service providers. This is due, in part, to providers having different funding sources,

SECTION 1 – EMERGENCY SERVICES

different reporting requirements, and diverse target populations. Information, therefore, tends to be shared within agencies, not across them. As a result, some providers may not utilize available resources. Similarly, due to the lack of coordination among providers, services are often fragmented with little or not continuity. Consequently, a crisis situation that threatens an individual's or family's housing stability may go unresolved.

Did You Know ...

Annually, in Yakima County:

- 1,847 individuals were turned away from shelters
- 459 households were turned away from shelters

SECTION 2 – MAINSTREAM SERVICES

People often need services, and low-income people must turn to public systems to secure the services they need. Some need services in order to work and earn the money to pay rent. Others need services, regardless of their income, in order to meet their basic responsibilities as a tenant and remain in housing. Public systems also supply medical care, job training, education, mental health treatment, childcare, substance abuse treatment, and transportation. Those systems are almost uniformly overburdened, and in many cases are not keeping up with new demands. These public systems require realistic funding and good policies to address new challenges.

Many mainstream service programs unintentionally work against homeless individuals and families who attempt to negotiate these systems. Homelessness is often a function of a mainstream system's inability to deal with issues such as lack of an address and telephone, illiteracy, loss of documentation, and incomplete medical records. For homeless people already beset with crises, navigating the system becomes yet another obstacle to stability.

SPECIAL HOMELESS POPULATIONS

"Street life is a culture unto itself"
— Network Member

Special populations of homeless individuals and families or those at risk of homelessness (i.e. veterans, youth, mentally ill-chemically addicted (MICA), individuals leaving institutions, domestic violence victims, etc.) often require multiple, integrated services. Without such services and the ability to readily access them, the homeless will remain without a permanent shelter and those at risk will become homeless. National studies have shown that three types of services are most needed among the homeless populations.

1. Mental health treatment is essential so that people with mental illness can earn money and pay rent, and for those with the most severe illnesses, so they can meet other responsibilities. A great deal of current chronic homelessness can be traced to the lack of a system of community treatment, linked with housing, to replace the system of decreasing beds available in state hospitals due to the closure of units at both Western State Hospital and Eastern State Hospital. Over the last decade there has been a 30 percent decline in the number of people cared for in state psychiatric hospitals. In Yakima County there are over 100 bed units available for mentally ill individuals who would be otherwise homeless.
2. The substance abuse treatment system is facing a severe treatment gap. The National Association of State Alcohol and Drug Abuse Directors indicates that 50 percent of those who need treatment receive it. Waiting times for treatment at publicly funded clinics often preclude effective help for those without stable housing. Currently there are 55 beds in halfway or transition housing programs

SECTION 2 – MAINSTREAM SERVICES

specifically identified for individuals leaving substance abuse treatment in the County.

3. Childcare is another important service. As welfare becomes less available to low income communities, single parents must work in order to stay housed. Public childcare is especially important for those at risk of homelessness. Homeless parents are less likely to have functioning networks of social supports, such as family members or friends who could care for their children, than are poor parents in general. Nationally, only one out of ten children who are eligible for child care assistance under federal law receives any help.

Did You Know ...

- Over 40% of homeless persons are eligible for disability benefits, but only 11% actually receive them.
- Although up to 39% of homeless people are mentally disabled, fewer than 11% of them receive disability benefits

NATIONAL LAW CENTER ON HOMELESSNESS AND

Homeless individuals living with HIV/AIDS must confront several additional issues that further complicate their situation such as access to transportation, medical management, and discrimination. Individuals who are HIV positive or diagnosed with AIDS are required to take medication at certain times with specific foods. Homeless patients generally do not have available food or water to satisfy these requirements. Or, medications may need to be mailed to a home address, further complicating the homeless HIV/AIDS patient's treatment. In Yakima County there are 5 beds and 13 voucher rental assistance slots reserved specifically homeless individuals living with HIV/AIDS.

ACCESSING REGULAR SERVICES

"People seeking services are often sent to numerous service providers only to learn at each stop that 'we have no funds for that go... to other provider.'"
-- Network Member

Mainstream health and social service programs are important funding sources for promoting many services that can help people transition from homelessness to stability. For those who qualify Medicaid law defines required services and optional services states can add. Within federal guidelines, states have limited flexibility within Medicaid to define who is eligible, what services they can receive, and how much is paid for those services. For both eligibility and services, in some instances states can apply for waivers, subject to Federal approval, to serve additional individuals or to provide additional services. Even when mainstream services exist, either to prevent homelessness or that can help people transition from homelessness to stable permanent housing, these services are not always accessed and utilized. Individuals/families in need of services

SECTION 2 – MAINSTREAM SERVICES

must first know that a particular service exists; then they have to know where these services are available.

ISSUE:

There are no easily assessed entry points for people needing services for homelessness.

Going from one service provider to another in order to possibly get the necessary services may be a formidable task; for some – especially those in rural areas such as Yakima County where there is no public transportation to link out lying areas with urban centers – it is an impossible task. The end result is to give up and accept the inevitable – homelessness.

A variety of resources are available in Yakima County to prevent homelessness. These are primarily concerned with providing some form of limited, short-term financial assistance. Virtually nothing exists in the way of services that show people how to avoid homelessness or develop the life-skills to maintain stability.

The homeless of Yakima face a daunting task of trying to get help. While there are resources available locally, these resources have historically been dispersed among multiple providers, primarily in the upper county. An individual or family at risk of becoming homeless, or who are already homeless, cannot simply “drop in” and automatically and quickly be linked with the necessary array of services. Too often available services are 20+ miles away from the individual/family needing them and there is no way for the individual/family to travel that distance.

CHALLENGE:

Establish entry points that provide all the services necessary to address homelessness.

The homeless resources in Yakima County are not “user friendly” to homeless people. Without a “user friendly” system, homelessness will not improve in this area. Homeless people will continue to give up due to all the barriers within the present system.

Did You Know ...

- Among those eligible for food stamps, only 37% receive them.
- Among families eligible for welfare benefits, only 52% receive them.

Nation Law Center on Homelessness and Poverty

Given the currently available resources in the county a primary need is to streamline the system so homeless people can move back into society through a coordinated service system that connects them with all of the necessary services.

SECTION 3 - DATA

From the perspective of mainstream society the homeless are almost invisible. Without a fixed residence the homeless are disconnected from local nuclear communities such as families, neighborhoods, and educational systems in which primary social bonds are developed, and the greater society in general. This disconnect separates the homeless individual or family from “normal” social supports. As a result, assessing the need for these supports only occurs in times of a family or individual “crisis”. While

intervention may resolve immediate issues, the conditions or circumstances that led to a family or individual becoming homeless remain unchanged. Too often the family or individual reverts to homelessness once the immediate crisis has been resolved.

THE FACE OF HOMELESSNESS

No single set of characteristics can define all homeless individuals or families. Each person or family without permanent, stable housing is unique. Some are veterans, others are in the process of leaving an institution, while still others are Mentally Ill and Chemically Addicted (MICA). There are, however, patterns of behavior that help to identify major types of homelessness. It is important to understand these types of homelessness in an effort to address the problem.

Did You Know ...

Among the homeless population nationally:

- 50% are African-American
- 35% are White
- 12% are Hispanic
- 2% are Native American
- 1% is Asian

National Law Center on Homelessness and Poverty

The first homeless group to address when seeking to end homelessness is the group that lives within the shelter system itself – the *chronically* homeless. While the single homeless population represents 50 percent of all homeless, the *chronically* homeless represent 10 percent of the single homeless population.

Few people in this chronic group are likely to ever generate significant earnings through wages. While they may have some income from wages and/or public benefits, they will require long term subsidization of both housing and services to support them.

The people who use shelters repeatedly, often called the *episodically* homeless group, constitute approximately 9 percent of the single population. This population often

SECTION 3 - DATA

includes victims of domestic violence. This group has a high public cost when housed in shelter because many of its members seem frequently to interact with other very costly public systems, particularly jails, prisons, and hospitals. Many are active substance abusers.

The *episodically* homeless group requires a flexible strategy that addresses both their housing needs (for those with mental health and/or chemical dependency issues both when in treatment and in relapse) and their need for treatment. When they are in treatment, or compliant with treatment requirements (i.e. clean and sober), supportive housing or private sector housing are good options. When they are unable to find acceptable treatment, or unwilling to partake in treatment or treatment regimens, other housing options must be found. Current policies in which *episodically* homeless people sleep in the street, in shelters, hospitals and penal institutions jeopardize public safety (primarily for them) and/or have high public costs.

There are different views about how best to address episodic homelessness. There are those who believe many *episodically* homeless people are those currently unwilling to engage in chemical dependency or mental health treatment. Therefore they believe it is necessary to create a type of housing that recognizes chemical dependency or mental illness, makes services available, but does not require sobriety or "stability". Models of so-called "low demand" housing exist, and it has further been suggested that low cost hostel or dormitory type housing with daily or weekly rental terms be developed. Others believe that most treatment available for chemical dependency or mental illness is not appropriate for this group (too short term, no follow-up recovery or transitional housing) and that the solution for the episodic group is a sufficient supply of appropriate treatment. Either options, or a mix of options, are probably needed.

ISSUE:

Planning and developing projects that respond to the needs of homeless people in Yakima County

Those who have relatively short stays in the homeless assistance system exit it and return infrequently, if at all, have been called the *transitionally* homeless. The majority of families and single adults who become homeless fall into this category, including domestic violence victims. They have had a housing crisis that has resulted in their homelessness. Despite the near universal shortage of affordable housing for poor people, they will find a way to house themselves. Since the homeless system is unable to address the real cause of their problem – the overall shortage of affordable housing – the best course of action is to facilitate their accommodation to this shortage and help them make it more quickly.

Nationally, the *Housing First* approach for most transitionally homeless families has proven to be effective. The focus of this approach is upon getting families very quickly back into housing and linking them with appropriate mainstream services – reducing their stay in housing to an absolute minimum.

For families in which the head of household has a chronic and longstanding illness that requires treatment, appropriate services must be attached. In this case attached services must include medical services, housing for family members, followed by an intermediate

SECTION 3 - DATA

level of supportive housing. This is also a model for the chronically homeless, single people.

ISSUE:

Lack of coordinated local data hinders identifying the scope of homelessness, and effectively accessing available resources

For families fleeing an immediate domestic violence situation, a *Housing First* approach is unlikely to be effective. Such families typically need a period of four to six months in a sheltered and secure environment in order to sever ties with the batterer. A major component of this transition must be the identification of affordable housing available at its completion.

Similarly for *transitionally* homeless single adults, the emphasis should be placed upon facilitating their move to permanent housing. Housing services, case management services, and follow-up services can be effectively utilized to maximize housing stability.

The current orientation is to keep people in the system for long periods of time, either because there is no place for them to go (*chronically* and *episodically* homeless), or because it is assumed that people are homeless because of some set of personal problems that can be “fixed” by the homeless system (families, *transitionally* homeless single adults). To end homelessness a different approach can be taken. People should be placed in housing as rapidly as possible and linked to available services.

HOMELESS COUNT

Any survey or attempt to count of the homeless in the county is, at best estimation. The U.S. Census Bureau acknowledged the logistical difficulties in its count of 300+ individuals using emergency shelters in the City of Yakima. Rural areas south of Union Gap are especially hard to survey; the number of homeless in the lower valley has not been established.

Data from the 2006 “Point in Time” homeless count indicates considerable growth in the homeless population in Yakima County. A total of 1265 unduplicated individuals and 940 households were counted as homeless. Of these 355 individuals (28%) were youth 0-17 years of age, 153 (12%) were considered chronically homeless, and 85 (7%) were victims of domestic violence. Of those counted, 160 (13%) suffered from mental health problems, 225 (18%) had a history of substance abuse, with 81 (6%) dually diagnosed (mentally ill and chemically addicted.) Untreated dental disease was found in 102 individuals.

On the night the count was conducted, 117 were found out of doors, 20 were found in their cars and 15 living in abandoned buildings.

CHALLENGE:

Develop a system to accurately collect, distribute, and coordinate data. This data will be used to access the scope of homelessness, and developing projects that address the needs of homeless people in Yakima County.

SECTION 3 - DATA

The greatest number of homeless was found in temporary housing including emergency shelters 153 (12%), transitional housing 305 (24%) or temporarily staying with family or friends 339 (27%).

The National Alliance to End Homelessness acknowledges that *“the extent of homelessness may never be known”*. This difficulty in locating and identifying homeless individuals and families is compounded by the lack of an information and data sharing system among the 20 agencies in Yakima County currently providing services to homeless adults, youth, and families. The lack of such a system compartmentalizes services to the homeless and inhibits the successful use of a “continuum of care” approach to the application of services. It also reduces capacity of these agencies to develop the resources necessary to address the needs of the homeless.

Every local government needs solid information on who is homeless, why they became homeless, what homeless and mainstream assistance they receive, and what is effective in ending their homelessness. This information is needed on a city- and county-wide basis, not just a program-by-program basis. This allows trends to be monitored to determine what is causing homelessness, to assess what types of assistance are available to address homelessness, and to fill the resulting gaps.

While there are numerous services available to the homeless, these services are not coordinated. Severe limitations on providers’ ability to address the needs of the homeless are exacerbated by:

- ◆ The availability of appropriate accommodations for the number of homeless generally and for families and unaccompanied youth in particular.
- ◆ The uneven distribution of resources throughout the county. There are significantly fewer services below Union Gap than in the entire City of Yakima.
- ◆ Long distances between urban centers and the absence of any transportation system beyond the City of Yakima. This often makes the job of connecting homeless individuals and families with available services such as jobs and low-cost housing impossible.

Did You Know ...

Among the homeless population in Yakima County :

- 3% are African-American
- 50% are White
- 32% are Hispanic
- 13% are Native American
- 2% are “Other”

National Law Center on Homelessness and Poverty

SECTION 4 - OUTREACH

In order to be effective, the *continuum of care* must be integrated and coordinated so that when homeless people make contact with one agency in the system, they can be linked across agencies with the full range of housing and support services they need to stabilize their lives and maximize their self-sufficiency. Therefore, an information and referral system which provides accurate and up to-date information about service and housing availability and which effectively links people with what they need is an absolutely essential aspect of a fully-functioning *continuum of care*.

THE IMPORTANCE OF INFORMATION SHARING

This information should be accessible to outreach workers, case managers, homeless people, and the general public. In addition to an accessible information and referral system, outreach is an important mechanism for connecting people with the services they need. For many people, an outreach worker provides the first point of contact with the service system; this may be through shelter day centers, multi-service or day drop-in centers, crisis hotlines, safe havens for domestic violence victims or the homeless mentally ill, informational street hand-outs, or mobile outreach workers who work on the streets.

"I often hear how many of these people don't want to go to agencies or their families to ask for help. They feel embarrassed and ashamed of their situations."

-- Network Member

Outreach is particularly important for people who are reluctant to make contact with the service system on their own. While for some people, one contact with the system may be enough to link them with needed

services; for many others, street homeless, people with mental health disabilities and others who have had negative experiences with the service system, repeated contacts over time are necessary to build trust. This process of building trust and assessing needs is called *engagement*.

Engagement occurs in various stages beginning with first contact where the outreach worker seeks to become a familiar face and begins to establish credibility; proceeding to initial engagement tactics where the worker attempts to engage the potential clients in conversation and uses small incentives to facilitate interaction, such as provision of needed items (toothbrushes or socks); and continuing to more ongoing engagement tactics where the worker begins to "hangout" with clients and helps them to meet needs that can be easily addressed, such as transportation, clothing, or basic medical care. Ultimately, if successful, the outreach worker will be able to assist clients in identifying their longer-term needs and accessing the services that can help them to move out of homelessness.

SECTION 4 - OUTREACH

BARRIERS TO RECOVERY

The barriers to ending homelessness are significant, yet can be overcome if communities are committed to identifying and addressing the causes of homelessness and the needs of homeless people. Outreach can provide the continuity and stability that is required to engender trust. As with other services, outreach efforts must be coordinated and jointly planned. Information must be shared among outreach providers who, in turn, must coordinate responses with the ultimate goal of accessing permanent affordable housing and the necessary supportive services for all homeless population groups. Most importantly, outreach must be a fundamental component of the *continuum of care* model.

*"People walking the streets
become invisible to our
communities."*

-- Network Member

Many homeless people suffer from mental illness, substance abuse, or domestic violence; the development of trusting relationships can take years. The number of homeless individuals inevitably exceeds the number of outreach staff available to help them achieve more

stable lifestyles. In order to bridge this gap, volunteers, including members of faith communities, students, business, and neighborhood organizations, need to be recruited and trained by skilled outreach teams to assist with this effort.

Most importantly, homeless people must be viewed as valuable members of society with special needs. Specialized services for each homeless group – chronic, episodic, or transitional – must be geared toward stabilization and permanent housing, rather than warehousing. Expanded and intensified outreach, combined with innovative approaches such as the *Housing First* model will have a positive impact on reducing the incidence of homelessness for people with multiple problems who have been homeless for significant periods of time. Outreach is a first and necessary step in this process.

Did You Know ...

Among the homeless population nationally:

- Among those eligible for food stamps, only 37% receive them.
- Among families eligible for welfare benefits, only 52% receive them.

Nation Law Center on Homelessness and Poverty

Outreach can play an important role in ending homelessness by engaging people who are living on the streets and getting them into housing. A key ingredient of effective outreach is a rapid link to housing, which necessitates some form of low-demand housing – housing with few rules or requirements. Youth or adults who are living on the streets often have a mental illness or substance addiction. Mandating treatment or sobriety can drive them away. Outreach that provides low-demand housing minimizes the negative effects of street living, which include worsened mental and physical health. When people

SECTION 4 - OUTREACH

feel safe and secure, they are more likely to participate in treatment. Housing has this effect.

AVAILABLE RESOURCES

Yakima County has a multitude of limited stand-alone outreach services to the homeless. These individual services were not, however, originally designed as components of an integrated "continuum of care". As a result, the currently available outreach services are not centralized.

ISSUE:

There is no central place (e.g. safe haven) for people who are homeless or at risk of becoming homeless to access information about services and potential resources.

The Yakima County Coalition for the Homeless (YCCH) provides limited outreach by bilingual staff (Spanish/English) to homeless individuals and families (approximately 20 per week) at emergency shelters, food banks, health clinics and the Community Services Offices for the Department of Health and Social Services (DSHS). When homeless persons are encountered, a brief assessment is conducted to identify the most appropriate shelter resources and referrals are made. Bilingual staff also provides information and makes referrals to individuals and families who walk into the YCCH office location (approximately 50 per week).

The Yakima Health District has bilingual staff that provides street outreach targeting chemically dependent and dually diagnosed people at risk of HIV/AIDS. They provide information about shelter and housing resources and make referrals when they encounter homeless people (approximately 15 per week).

The DSHS Community Service Office staff provide information and referral to homeless people who apply for benefits.

Central Washington Comprehensive Mental Health operates two homeless programs. The first is Projects for Assistance in Transition for Homelessness (*PATH*). This is for individuals identified as having a Serious Mental Illness (SMI). The second program is a 12-bed shelter for homeless veterans.

Open Line (community crisis line) and Access (community information line) receive phone calls from individuals and families experiencing a housing emergency and volunteers provide information and make referrals to shelter programs.

CHALLENGE:

Establish a centralized information and referral point for people who are homeless or at risk of becoming homeless

Triumph Treatment Services has put in place since July 2000 an outreach program called P-CAP (Parent-Child Assistance Program). It provides outreach, mentoring, and follow-up for three years to pregnant and postpartum substance using women in Yakima County. Homelessness is often an issue for them.

Northwest Justice Project conducts outreach of farm labor camps during the growing season. In the course of this outreach housing needs are identified and, when appropriate, referrals are made.

SECTION 4 - OUTREACH

The YWCA Family Crisis Program in Yakima and the Lower Valley Crisis and Support Services in Sunnyside provide outreach to victims of domestic violence and families in crisis. Both programs provide temporary/crisis shelter assistance, arrange for transitional shelter assistance, and information and referral services.

In order to utilize services or potential resources of any type, several steps must be complete. The first of these steps is to know that services and resources exist. The second step is to know where to find these services and resources. The final step is to be able to access these services and resources. Each of these steps may be a significant barrier to the homeless seeking assistance. Outreach is a major tool in overcoming these potential barriers.

THE IMPORTANCE OF OUTREACH

Outreach services need to adopt the goal, successfully used in other communities, of moving people into shelter for their own safety. In focus groups, homeless people voiced support for additional training for outreach workers. Training among law enforcement

“Providing resources in Yakima County to streamline the system so homeless people can move back into society through a coordinated service system will improve our area immensely.”

-- Network Member

personnel is particularly needed because homeless people indicated that law enforcement involvement in outreach would not be helpful. However, the experience of other communities is that people involvement is essential to help move homeless people off the street for their own safety, particularly when the weather is dangerously cold.

A basic step to end chronic homelessness in Yakima County is for the existing outreach capacity of service providers to be expanded to fully meet the level of need. The linkages between the outreach component and the rest of the service system must be improved so that clients can be immediately linked to housing and services when they are ready to access them. This can be achieved by developing referral agreements between outreach providers and housing and service programs. These agreements need to include the dedication of engagement housing and permanent housing slots for access for clients referred by the outreach component.

SECTION 5 - SHORTEN HOMELESSNESS

Ending homelessness will not be realized unless a comprehensive, community-wide investment is made in redefining systems of care and removing existing barriers to services. For homeless people, lack of clean clothes, phone, mailing address, and documentation can make securing work difficult if not impossible. For a homeless person who suffers from mental illness, compiling the required medical records and completing the application process for public benefits can be insurmountable task. For a homeless teen, entry into the school system may be impossible unless trusting relationships can be developed.

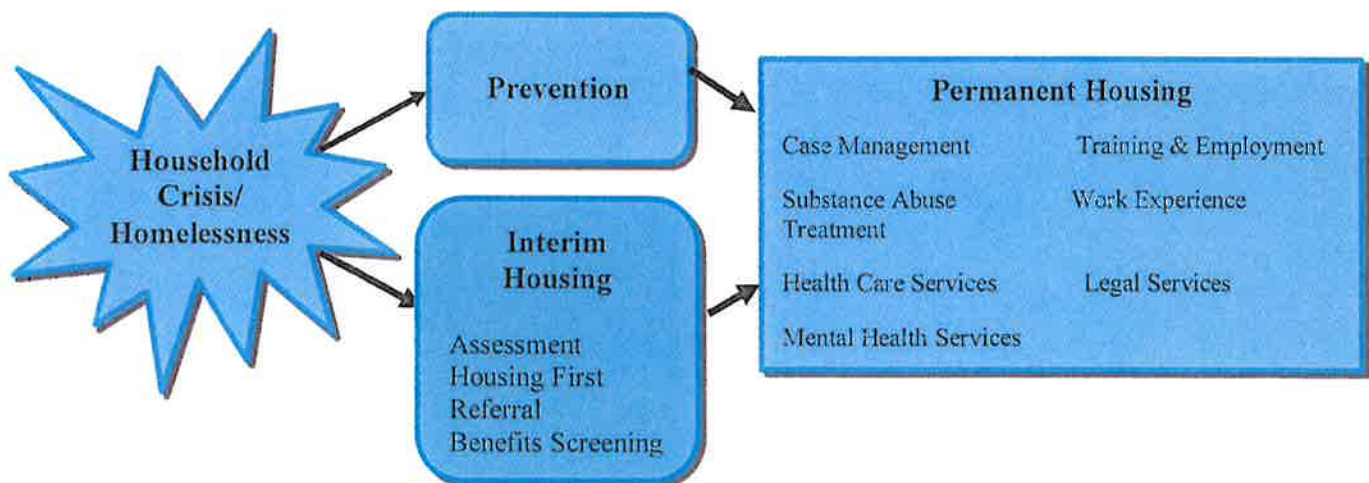

ENDING HOMELESSNESS

Ending homelessness requires an alignment of resources to reduce the duration of each spell of homelessness, and prevent recurrence. In the “continuum of care” model, this means using a community plan to seamlessly organize and deliver housing and services to meet the specific needs of people who are homeless or at risk of becoming homeless as they move to stable housing and maximum self-sufficiency. It includes strategies to end homelessness and prevent a return to homelessness.

HOUSING FIRST

One of the more successful approaches to date is the *Housing First* model. This approach is critical to successfully ending homelessness. *Housing First* involves addressing the immediate barriers to housing so that homeless people can move into permanent housing as quickly as possible. Service needs are addressed through home-based case management, which helps stabilize the family, ensure that they will have sufficient income to sustain their housing, and prevent a recurrence of homelessness.

SECTION 5 - SHORTEN HOMELESSNESS

“Coordination of a community of vision and current delivery of service will greatly enhance the quality of service as for homeless people and enhance the effective use of limited resources.”

— Network Member

Effective implementation of a *Housing First* approach requires the creation of a full continuum of housing opportunities. To accomplish it will be necessary to:

- ◆ Develop short-term interim housing focused on helping people access permanent housing as quickly as possible. Services provided in interim housing would include housing search assistance and case management to help address immediate needs and identify longer-term issues to be dealt with once in permanent housing.
- ◆ Develop programs throughout the county to create additional housing units. These units would be designed to provide a way in off the streets for those who are unwilling or unable to access other housing options – it has no time limits on length of stay, has few rules and requirements, and offers access to services on an optional basis.
- ◆ Expand the availability and accessibility of permanent housing affordable to people with extremely low incomes. Typically people with extremely low incomes are those who are living on public benefits, are homeless and have no source of income, or are employed earning only minimum wage.
- ◆ Facilitate the development of more supportive housing. Supportive housing is affordable permanent housing that is linked to an integrated and individualized package of services and supports designed to maximize health, self-sufficiency and quality of life. This type of housing is essential for chronically homeless people and others with serious disabilities.

For such a system to be effective, the incentives embedded in the homeless assistance system have to reflect these outcomes. Examples of such incentives include:

ISSUE:

There are limited opportunities to develop self-sufficiency because of a lack of resources, opportunities, housing and continuum of support services.

- ◆ Shelters and other homeless services providers should have access to and incentive to use prevention resources to avert a homeless episode.
- ◆ Shelters and transitional housing providers should have incentives to move people out of homelessness and into stable permanent housing as quickly as possible. To the maximum extent possible, a homeless person's service needs should not delay his or her entry into permanent housing.
- ◆ Structures should be in place to meet the service needs of re-housed households to be able to remain in stable housing.
- ◆ Homelessness providers should be held accountable for people they have served in the past and should be rewarded to the degree that their former clients continue to have stable housing.
- ◆ At the same time, homelessness providers should be encouraged to serve people who have the most barriers to permanent housing

SECTION 5 - SHORTEN HOMELESSNESS

and are most likely to be homeless longest.

- ◆ Outcome measures should track the number of people who become homeless, the average length of homeless episodes (not necessarily the average stay in a shelter), and the rate of recidivism.
- ◆ Homelessness programs should be discouraged from using time limits, sanctions, or other devices that may reduce shelter use but do not end homelessness.

Safe and secure housing is one component of escaping homelessness for individuals and families. In the long term, success in escaping homelessness depends on developing self-sufficiency. This, in turn, can best be accomplished by developing resources and supportive services that provide opportunities for developing self-sufficiency.

Community resources not specifically targeting homeless people provide emergency and remedial assistance to anyone who is in need. A variety of social service agencies have signed on as “partners” and the intake/assessment staff and case managers facilitate access to these services for homeless clients. Case Management as an integral component of transitional housing programs has as a primary goal linkage to other supportive services in the community which are necessary if homeless individuals and families are to become self sufficient.

The development of county-wide integrated systems and multidisciplinary services with the goal of coordinating services to the homeless is essential to end homelessness. This requires the integration of services to share client information, resources and planning in order to address the multiple problems often experienced by homeless individuals and families, including lack of and barriers to, service.

CHALLENGE:

Expand opportunities to develop self-sufficiency by increasing resources, diversifying opportunities, and broadening the continuum of supportive services

Did You Know ...

Among the homeless population nationally:

- Fewer than 30% of those eligible for low-income housing receive it
- Only 30% of poor people eligible for housing assistance actually receive it.

National Law Center on Homelessness and Poverty

SECTION 6 - RAPID REHOUSING

Rapid rehousing of families and individuals with greater challenges requires flexibility in providing follow-up support and case management. Experience has shown that the flexibility to provide follow-up assistance for those rapidly rehoused remains cheaper than allowing those with significant challenges to remain in transitional housing.

Experience has shown that without integrated systems at the administrative and client levels, homeless individuals tend to cycle through the system without making gains toward long-term housing stability. While most homeless families get themselves back into housing quickly after they become homeless, services delivered in the homeless system seem to have little effect on the eventual stability of these families in housing. This lack of progress toward stability testifies to the often-fragmented service delivery system.

"Temporary housing helps hold the family together while they seek better circumstances, opportunities for self-reliance."

— Network Member

Many homeless people suffer from chronic health conditions, mental illness and substance abuse. Unfortunately the homeless, health and substance abuse systems are not always able to adequately address the needs of individuals with multiple needs. Compared to the general population, homeless people have significantly higher rates

of many acute and chronic illnesses, including HIV/AIDS, which are exacerbated by malnutrition, substance abuse, injuries, and increased risk of communicable diseases.

TRANSITIONAL HOUSING

Various homeless population groups require transitional housing that is tailored to address their specific needs. Irrespective of the type of transitional housing, programs should focus on removing significant barriers to both obtaining and sustaining housing. Transitional housing should provide housing to homeless people who are not deemed "housing ready" and provide supportive "wrap-around" services to maintain housing. In this type of housing it is important to remember that transitional housing is another component in the continuum of care.

One of the principle features of effective transitional housing is that it uses centralized, integrated, multidisciplinary services as a support. Multidisciplinary services provide

physical and mental health, substance abuse, social and vocational services as a means of stabilizing the individual or family during the transition process.

"Most do not choose to be homeless but could not avoid it. We need housing services available for these people to help them overcome any obstacles in their way."

— Network Member

In many respects, housing stability is a function of a household's ability to access fundamental resources and supports that assure that, when a

SECTION 6 - RAPID REHOUSING

crisis occurs, it does not threaten the security of that housing. For all of us, these supports include affordable healthcare with mental health and substance abuse treatment services, livable wage employment and/or other income supports, and for families, childcare. These supports are all the more critical for poor households, for whom a crisis often means choosing between addressing essential needs for housing, food, or medical care.

WRAPAROUND SERVICES

Ensuring that households have access to a full range of resources and services to protect the stability of their housing can be achieved through the implementation of a “wraparound services” approach. “Wraparound services” refer to a comprehensive service provision model that guarantees that any and all services needed by an individual or family are integrated through a cohesive, individualized service plan that guides all service provision. This service approach should be infused across all components of its homeless service delivery system – prevention, interim housing, and permanent housing.

Service integration to achieve “wraparound services” must occur at both the system and client levels. In this mainstream agencies must enhance the accessibility of their services to homeless people. This can be facilitated through.

- ◆ Integrated services at the system level: System level service integration allows people and information to move easily between programs, thus maximizing the likelihood of successful outcomes, facilitating people’s transition from homeless services to community-based services once housing is regained, and allowing evaluation of outcomes and resource use from a system wide perspective.
- ◆ Integrated services at the client level: Client level service integration typically involves active case management to facilitate access to the full package of services needed as well as staff level coordination in which services are provided through a team approach or through grouping services at one or more strategic locations.

Currently, service referral is a component of most homeless service provision, but in the absence of more active and integrated case management, referral-based case management often results in fragmented care. The implementation of a “wraparound services” approach will mean that case managers across agencies must work together to develop one plan of action for each client, with each agency contributing, according to its strengths and resources, to support the individual or family in achieving housing stability and long-term self-sufficiency. Because service intensity is determined based upon client need, this may also mean that initially an agency provides daily or weekly case management, which may shift to monthly or on-call assistance over an extended period of time. For some, services will always remain an integral part of the residential environment. For others, this support will be transitional, sufficient to ensure that employment and community-based resources, such as health care, schools, social services, civic organizations, and communities of faith are secured.

SECTION 6 - RAPID REHOUSING

TRANSITIONAL HOUSING

ISSUE:

There is a shortage of supportive and transitional housing opportunities for high-risk populations

Transitional housing programs are severely limited in terms of both the number of housing opportunities available as well as the ability of these opportunities to adequately meet the needs of specialized homeless populations in a continuum of care.

Since 1989 the Yakima County Coalition for the Homeless has developed and operated a 35-transitional-housing unit program for families. This program includes limited case management and limited coordination of supportive services. Currently, Triumph Treatment Services, Care Bears, Central Washington Comprehensive Mental Health, and Clean House provide transitional housing for homeless populations with special needs.

The most significant gaps in services to special homeless populations are:

- ✓ Transitional housing in lower Yakima County
- ✓ Transitional housing for single adults infected with HIV/AIDS
- ✓ Transitional housing for adults recovering from substance abuse
- ✓ Transitional housing for homeless youth not living in families
- ✓ Adequate supportive services for these specialized populations

CHALLENGE:

Increase supportive and transitional housing for high-risk homeless groups

DID YOU KNOW ...

Among the homeless population nationally:

- 44% of homeless adults are employed full or part time.
- More than 3 million poor Americans spend more than half of their total income on housing.

National Law Center on Homelessness and Poverty

SECTION 7 - PERMANENT HOUSING

Without permanent housing as an end goal, the entire continuum of care approach to homelessness services ceases to function as a dynamic system moving people toward stability and self-efficiency. Instead the system becomes a warehouse for people. The only lasting solution to homelessness is access to housing that is affordable and, for certain populations, linked to necessary support services. Permanent supportive housing - independent housing linked to comprehensive social, health and employment services - has proven to be very effective in enabling otherwise homeless people to obtain and maintain housing.

Permanent solutions to homelessness must address its fundamental cause: the inability to pay for housing.

Permanent solutions to homelessness must address both the shortage of affordable housing and the inadequacy of income to meet basic needs. Permanent solutions must also address the additional need for treatment for people suffering from disabilities.

ELEMENTS OF A PERMANENT SOLUTION

According to the *National Law Center on Homelessness and Poverty* permanent solutions must:

- ◆ Ensure Affordable Housing Provide subsidies to make existing housing affordable; create additional affordable housing through rehabilitation and, where needed, new construction
- ◆ Ensure Adequate Income Ensure that working men and women earn enough to meet basic needs including housing, ensure that those able to work have access to jobs and job training, ensure that those not able to work are provided assistance adequate to meet basic needs, including housing
- ◆ Ensure Social Services Ensure access to social services, including health care, child care, mental health care, and substance abuse treatment
- ◆ Prohibit Discrimination Prohibit laws that discriminate against homeless people, including laws that specifically target them or activities they must engage in because they are homeless

Permanent solutions must also prevent people from becoming homeless. New policies that address the underlying structural causes of homelessness – by addressing housing, income and treatment problems – must coincide with specific prevention policies to stem the rising tide of homelessness.

SECTION 7 - PERMANENT HOUSING

Increasingly, homelessness affects not only the very poor, but also working and middle class Americans. Middle class families are increasingly unable to afford to buy, or even rent, their own homes. Middle class workers are now facing rising unemployment, coupled with declining assistance from “safety net” programs.

“A lot of people just don't have any place to go.”

— Network Member

Permanent solutions to homelessness reintegrate homeless people into society and foster self-empowerment. Policies that produce affordable housing by employing homeless people are among the necessary policies that strengthen the economy while also helping to end homelessness.

“Often there isn't enough or available affordable housing which leads to these people living longer on the streets.”

— Network Member

Despite recent media reports to the contrary, polls consistently reveal that the majority of the American public supports aid to the homeless. According to the polls, the majority of the public understands the

underlying causes of homelessness, and 81 percent would pay additional taxes to fund increased aid.

Providers in the County identify the lack of affordable housing as a significant cause of homelessness and a barrier to people trying to move out of homelessness. When the door to affordable housing is closed, many families languish in the system. Nationally, the average annual cost of placing the children of a homeless family in foster care is \$47,608, while the average annual cost for a permanent housing subsidy and supportive services for a family of equal size is about \$9,000. Without access to a housing subsidy, some families remain homeless for a longer period of time. Ironically, the cost of a voucher that would prevent homelessness or reduce the length of time families remain homeless is often less than the cost of providing shelter assistance.

The true cost of sheltering a family must also include the long-term effects on children of low self-esteem, poor nutrition, stress and other variables associated with instability. These costs are incalculable.

DID YOU KNOW ...

- Yakima County has less than a 6% vacancy rate.
- In Yakima County 36% of households spend more than 30% of their income on rent.

-- American Community Survey

SECTION 7 - PERMANENT HOUSING

ISSUE:

*Lack of safe,
decent and
affordable
permanent
housing in Yakima
County*

One of the primary challenges homeless people face is navigating the housing market. Most communities have a shortage of housing affordable for low-income households. Consequently, landlords can select the most appealing tenants, many of whom have higher incomes, and require a large sum of cash for a deposit and first and last month's rent. There is little incentive for landlords to work with potential tenants who have lower incomes, little savings, credit problems, or unstable housing histories.

Housing placement services can address many of the barriers homeless people face. Effective housing search services often include the following elements:

- ◆ Skilled housing search staff with knowledge of local housing markets and relationships with landlords
- ◆ Marketing and outreach to landlords
- ◆ Incentives for landlords to rent to homeless households
- ◆ Assurances to landlords that the housing services agency will assist with landlord/tenant problems
- ◆ Access to subsidies, such as vouchers, for households with extremely low incomes
- ◆ Coordination with service providers to ensure that a homeless person's service needs are met once he or she is in permanent housing
- ◆ Periodic follow-up work to prevent a housing crisis
- ◆ Services to address credit problems

The skills necessary to effectively place homeless people in private market housing combine those of a realtor and a caseworker. Locating and developing qualified staff is one of the greatest challenges to having an effective housing search and placement system.

Housing instability for extremely low-income individuals will continue until the supply of affordable housing increases substantially. While federal funding for affordable housing has dramatically declined over the past decade, states and municipalities have developed a number of strategies to respond to the housing needs of extremely low-income individuals.

The number of state and local housing trust funds has significantly increased since the 1990s leveraging resources to increase the supply of affordable housing for low-income people. Some counties and cities have developed inclusionary zoning programs, requiring developers to include affordable housing units when building new developments.

CHALLENGE:

*Expand
housing
opportunities
for affordable
permanent
housing*

SECTION 7 - PERMANENT HOUSING

This problem is further exacerbated by the cost of housing in the County and the disparity between housing costs and wages. Without sufficient permanent affordable housing, the continuum dead-ends with emergency shelter and transitional services. If homelessness is to be addressed, significant developing of housing units must be a central strategy.

Recent census information illustrates the difficulty of obtaining affordable permanent housing in Yakima County. Rental units comprise 36 percent of all housing in the County. Due to the large transitory population in the county, combined with a population increase of nearly 2 percent a year, available rental housing is in short supply; currently there is only a 5.5 percent vacancy rate. This shortage of rental housing has, in turn, driven the cost of a single bedroom rental house to \$511 per month. Much the same is true for residential homes. The average price per home in Yakima County is \$125,700 which represents an increase of 34 percent over the last ten years while median household income has only increased 30 percent over the same period.

Not only is permanent housing in short supply, affordable housing is practically non-existent.

SECTION 8 - SYSTEMS PREVENTION

The majority of people who enter the homeless assistance system receive help and exit the system relatively quickly. But no sooner do people successfully exit the system than others replace them. This is why the number of homeless peoples does not decrease. If we are going to end homelessness we must **prevent** people from becoming homeless.

APPROACHING PREVENTION

This can be done in two ways. The first is to demonstrate that although shifting responsibility for homeless people to the homeless system may seem to be cost efficient, it is actually more costly over all. For example, sending parolees to shelters rather than halfway houses may *seem* cost efficient. However, it can increase recidivism, and result in use of other costly systems such as hospital emergency rooms.

Second, systems can be rewarded for improving their outcomes, as measured by homelessness. Providing incentives to programs, which reduce the number of their clients or wards who become homeless, could do this. Conversely, it could be accomplished by penalizing these systems when a client becomes homeless.

In the past, homelessness prevention focused primarily on stopping eviction or planning for discharge from institutions like jail or mental hospitals. These are important, but we must take a more comprehensive approach.

It has long been argued that the most humane strategy for addressing homelessness for those at imminent risk is to prevent its occurrence in the first place. Prevention efforts include strategies such as short-term rent or mortgage assistance, legal assistance

"It is important to identify the situation that resulted in them being homeless, assist and educate them to prevent another occurring and allow them the opportunity to be a productive part of our community."

— Network Member

programs, representative payee and direct payment programs, and housing placement services. They also include more systemic strategies that seek to prevent homelessness by ensuring that people leaving institutions such as jails, prisons, or treatment facilities are not discharged to the streets or shelter system, as well as strategies that seek to forestall homelessness in cases of family

crises such as domestic violence. By far the most common prevention approach is the provision of one-time or short-term financial assistance.

Most homeless people are clients of a host of public social support systems, often called the *safety net*. Others are the wards of programs in the criminal justice system or the child welfare system (foster care). Together these programs and systems are called the *mainstream system*. In a way, homelessness is a litmus test – it can show whether the outcomes of the mainstream system are positive or negative. Insofar as their clients or

SECTION 8 - SYSTEMS PREVENTION

wards end up homeless, programs of the mainstream system often have unintended bad outcomes.

CHANGING MAINSTREAM SYSTEMS

ISSUE:

There is no single point of entry that addresses legal, emergent, and supportive needs of people who are homeless or at risk of becoming homeless in Yakima County

Generally speaking, these mainstream systems, while large in terms of scope and funding, are oversubscribed and underfunded relative to their responsibilities. Is it not surprising, therefore, that they are quick to shift responsibilities and costs elsewhere, when they are able. The homeless assistance system provides one such opportunity. To the degree that homeless programs take responsibility for a whole host of very poor people, the mainstream system does not have to. However, the homeless system is not large and well funded. It can meet immediate needs, but it cannot prevent people becoming homeless, and it cannot address their fundamental need for housing, income and services. Only the mainstream system has the resources to do this.

To end homelessness, the mainstream programs must prevent people from becoming homeless. In order to eliminate new cases of homelessness, community providers should:

- ◆ Expand existing prevention services, including emergency rental assistance, case management, housing search assistance, legal assistance, landlord mediation, money management and credit counseling
- ◆ Improve early identification and intervention efforts by mainstream health and social service agencies which are often in touch with households at-risk, all public, non-profit and faith-based health and social service providers could assess clients for risk of homelessness as part of client intake interviews
- ◆ Enhance discharge-planning efforts so that people leaving the criminal justice system, foster care, hospitals, mental health programs, and drug and alcohol treatment programs are not released into homelessness; this would involve the corrections system, foster care, hospitals, mental health programs, and drug and alcohol treatment programs to develop residential stabilization programs to connect clients to community housing and services prior to discharge

Homeless individuals and families have a large variety of needs, both short term and long term. These needs range from health concerns to legal issues, and employment. In many instances, however, it is difficult for homeless individual and families to access such individual services due to geography and the lack of transportation.

A variety of resources are available in Yakima County to prevent homelessness. These include: short term rental assistance to prevent evictions; help with first month's rent;

CHALLENGE:

Establish a single point of entry system, which provides a comprehensive range of services and information.

SECTION 8 - SYSTEMS PREVENTION

security deposit payments and credit report fees to assist individuals and families in obtaining housing, housing repair programs through municipal and county Community Development Block Grant programs, assistance with utility payments, housing counseling and referrals, fair housing and landlord tenant information, and advocacy.

The following is an example of assistance available in Yakima County:

- ◆ Yakima County Coalition for the Homeless (YCCH) – advocacy with landlords, tenant training, security deposit guarantees, rental assistance for 10 families per year
- ◆ Opportunities Industrialization Center (OIC) – Yakima – emergency assistance to prevent homelessness up to 15 families per year
- ◆ St. Vincent De Paul: FEMA - rent assistance to prevent homelessness approximately 30-50 families per year
- ◆ Salvation Army – Yakima and Grandview
- ◆ Washington State Department of Social and Health Services, countywide – emergency rent assistance to prevent homelessness for TANF families
- ◆ City of Yakima Office of Neighborhood Development Services (ONDS) - fair housing and landlord tenant counseling and advocacy, home repair assistance
- ◆ Yakima Neighborhood Health Services – medical and dental services for low-income families and the homeless
- ◆ Northwest Justice Project - fair housing and landlord/tenant counseling and advocacy
- ◆ Volunteer Attorney Services - fair housing and landlord/tenant counseling and advocacy

Nationally

➤ 40% of homeless families have children

➤ 67% are single parent families

NATIONAL LAW CENTER ON HOMELESSNESS AND POVERTY

SECTION 9 - INCOME

Most homeless people will reenter housing without the benefit of a deep housing subsidy. For them, rehousing cannot occur without income. The quicker a minimal/livable income is obtained, the sooner a new home is possible.

Many of the employment models explored as part of welfare reform show how people can quickly obtain work, in many instances paying enough to afford a minimal rent. In order to stabilize housing, however, people who have been rehoused must be linked with longer-term, career-based employment services, giving them the tools they need to increase their earnings. In locations with higher rent levels, this will sometimes be necessary even to initially escape from homelessness. Mainstream systems such as those funded by the federal government under the Workforce Investment Act should be used for this purpose.

THE ROLE OF INCOME IN HOMELESSNESS

Many homeless people are unable to work due to a disability, or unable to quickly earn enough to afford rent. They are often eligible for cash assistance from Supplemental

"The wages they make aren't enough to live on and they struggle from month to month trying to make ends meet. Unfortunately, eventually these people can't support themselves and their families and wind up on the streets."

-- Network Member

Security Income (SSI), Temporary Assistance for Needy Families (TANF) or similar programs. Systems should be in place to work through the eligibility processes in these programs as quickly as possible. As the National Alliance to End Homelessness points out, this may require exceptions to local TANF procedures, which in some places

involve discouraging people from applying for benefits. These exceptions are worthwhile, however, because of the increased self-sufficiency that comes about as a result of more stable housing.

The term *economically disadvantaged* encompasses several sub-populations that may be dealing with homelessness. Each group has its own set of extenuating circumstances that further complicate homelessness. The elderly, for example, may be on a fixed income, thus affecting their access to housing, medical and dental care, and medication.

In general, the economically disadvantaged population tends to be homeless families in crisis. This includes domestic violence victims. These families face unaffordable housing and a shortage of supportive services.

Work does not pay for housing. According to the National Low Income Housing Coalition, there is no community in the nation in which a person working at minimum wage can afford to rent a one-bedroom unit. In Yakima County, a full-time worker would have to make \$12.71 per hour in order to afford a two-bedroom rental unit.

Alternatively, a person working at minimum wage would have to work 69 hours a week on average to afford a two bedroom home.

SECTION 9 - INCOME

For the poorest Americans, reduced incomes are part of a long-term trend. Wages for the lowest-paid workers have gone down significantly in real terms over the past 20 years. The decline in real wages has gone along with an even greater deterioration in the availability and purchasing power of public benefits for the poorest and most afflicted people. In 1995 Congress amended the Supplemental Security Income program so that drug and alcohol addiction could not be considered grounds for disability. In 1996 Congress passed the Personal Responsibility and Work Opportunity Reconciliation Act, which affected food stamp allocations for many people, eliminated SSI eligibility for some children, and turned the administration of welfare programs for families over to the states.

TOWARDS A BETTER FINANCIAL BASE

ISSUE:

There are limited opportunities for people who are homeless or at risk of becoming homeless to earn livable wages in Yakima County

While there has been much controversy about the over-all impact of welfare reform, one fact that all concerned seem to agree on is that income of the very poorest families have gone down. Despite a superbly healthy economy, for example, the income of the poorest 20 percent of female headed families with children fell nearly \$600 since 2000. The erosion of income was caused largely by sharp reductions in government cash and food assistance for poor families.

In order to increase the economic self-sufficiency of homeless people, economic opportunities need to be expanded. This could include:

- ◆ Foster the creation of more employment opportunities for homeless people because homeless people often need help getting their foot in the employment door. This is due to a variety of reasons, including the lack of employment opportunities in today's economy, their limited work history and experience, and reluctance by employers to hire homeless people.
- ◆ Ensure that homeless people have access to supports to facilitate their success at employment. In order to be effective for homeless people, education and employment services must be offered as part of an integrated service package; people often need a variety of other services in order to enable them to make a success of their education, training and job search efforts. A priority in this service package must provide affordable child care slots for homeless people engaged in education and employment activities.

Economically Yakima County is chronically depressed. The average unemployment rate is twice the state average. Due to the predominance of service industry and seasonal jobs the average yearly income in the county is 33 percent below the state average. In order to afford an two bedroom residence an individual's annual salary must be higher than \$26,440. For many homeless individuals and families, including the so-called "working poor", earning a

CHALLENGE:

Expand the opportunities for people to earn a livable wage.

SECTION 9 - INCOME

livable wage is almost beyond their means. Jobs are often difficult to obtain, wages are low, and there is no guarantee to job security.

For those who are already homeless simply finding a job is a Catch-22 situation. As one woman explained, *"You go in there and explain to people I am homeless. I need a job so I can get out of this homeless situation. They are not going to hire you because you are homeless."*

Did You Know ...

Nationally

- 31.1 million people lived at or below the poverty line.

TEN YEAR PLAN

GOAL

Reduce the number of homeless persons in Yakima County by 50% by the year 2015.

OBJECTIVES

- I. Reduce the number of Homeless Families
- II. Reduce the number of non-chronically homeless individuals
- III. Reduce the number of chronically homeless individuals
- IV. Reduce the number of homeless youth
- V. Conduct adequate data collection and planning to efficiently manage limited resources for homelessness

STRATEGIES

- 1. Develop, enhance and expand affordable housing stock
- 2. Prevent homelessness from occurring
- 3. Increase household income
- 4. Improve access to health services

I. Reduce the Number of Homeless Families

HOUSING STRATEGIES

Develop, enhance and expand affordable housing stock

Activities:

- Short-term**
1. Develop (build or rehabilitate) 30 new units of affordable housing
 2. Increase the number of units in organizations currently providing emergency, shelter, transitional and/or permanent supportive housing by 10%
 3. Develop 56 additional clean and sober units
 4. Increase the number of rental vouchers for homeless families by 15
- Long-term**
5. Develop (build or rehabilitate) 60 new units of affordable housing

I. Reduce the Number of Homeless Families

PREVENTION STRATEGIES

Prevent homelessness among families at imminent risk of losing housing

Activities:

Short-term

1. Secure additional funding to expand Housing First opportunities for 50 families: cash assistance, transportation, utility support, communications, rent, intense case management and educational/job skill development
2. Develop an initiative where benefits providers and homeless services providers meet regularly to discuss ways to increase education on benefits and to establish multiple points of entry for all homeless services where homeless can apply for emergency assistance and obtain necessary information about housing options and screen for TANF, Medicaid, Medicare, Basic Health, GAU, VA and other assistance programs
3. Implement an intense case management system within housing projects using housing and homeless resource staff who will provide support and advocacy and maintain contact with individuals who are homeless or at-risk of becoming homeless
4. Create a coordinated training program that expands current educational opportunities combined with other living skills to assist people in maintaining their households
5. Create and distribute a printed resource information directory for homeless persons with services specified by categories
6. Develop an advocacy system to resolve disputes with landlords and prevent loss of housing for persons at risk of homelessness
7. Create a homeless peer support group that provides long-term follow-up, companionship and advocacy for families and individuals
8. Develop an online resource directory of housing services that includes an inventory and information about available low-rent housing options including housing for specialized populations and their criteria which is updated and maintained by service providers and can be accessed by the public
9. Develop public service campaign on the issues of homelessness and prevention and provide information about the availability of subsidized housing programs and how to access these resources
10. Expand weatherization and small home repair programs to low-

I. Reduce the Number of Homeless Families

income individuals and persons at risk of homelessness

11. Develop regular training and education for case managers and advocates (e.g. SOARS), develop networking opportunities

II. REDUCE THE NUMBER OF NON-CHRONICALLY HOMELESS INDIVIDUALS

HOUSING STRATEGIES

Develop, enhance and expand affordable housing stock

Activities:

- Short-term**
1. Develop (build or rehabilitate) 30 new units of affordable housing
 2. Increase the number of units in organizations currently providing emergency, shelter, transitional and/or permanent supportive housing by 10%
 3. Develop 56 additional clean and sober units
 4. Increase the number of rental vouchers for homeless individuals by 25
 5. Develop 10 non-religious, wet housing units for individuals or persons waiting to get into treatment
 6. Develop 10 units for re-entry housing (persons coming out of institutions)
- Long-term**
7. Develop (build or rehabilitate) 20 new units of affordable housing

IV. REDUCE THE NUMBER OF HOMELESS YOUTH

INCOME STRATEGIES

Prevent homelessness among homeless youth

Activities:

Short-term

1. Establish Individual Development Accounts (IDA) for families or individuals to use towards a home purchase or education
2. Develop bilingual job readiness program for homeless families and individuals that includes modules in life skills and pays scholarships, childcare, housing subsidy and transportation for specialized populations in safe, positive environments

IV. REDUCE THE NUMBER OF HOMELESS YOUTH

HEALTH STRATEGIES

Improve access to health services for homeless youth

Activities:

Short-term

1. Establish a program where registered nurses accompany mental health case managers to provide "on the street" first aid and minor medical services with referrals made to other area providers for treatment of more serious conditions or access to supportive services
2. Establish proactive outreach and harm reduction for IDU's by providing day-to-day referrals for wound and abscess care and transfer care from the ER to neighborhood health clinics

TOTAL COST AND UNMET NEED FOR HOUSING THE HOMELESS

Yakima County's 10-year plan is an ambitious undertaking that will require the combined resources and efforts of local government, business, non-profit organizations, the faith community and individual citizens in order to achieve our ultimate goal of ending homelessness in Yakima County. The following tables and graphs represent our best estimate of the total cost and number of beds and housing units it will take to achieve our goal.

Esitimated Unmet Need for Beds/Units

Number of Beds/Units to be Created

Percentage of Need to be Met

Total Costs to Acheive Goal

RECOMMENDATIONS FOR STATE LEGISLATIVE AND POLICY CHANGES NEEDED TO ADDRESS HOMELESSNESS

1. Introduce legislation to prevent families from being evicted from November 1 - April 1 (winter months - similar to Minnesota law).
2. Increased funding for housing, food and utilities through the following State programs (ESAP, EFAP and LIHEP) and give a higher priority to serving the homeless.
3. Create easier ways within DSHS for homeless persons to access cash benefits similar to the national SOARS initiative.
4. Make serving the homelessness population a top priority in state agencies and programs.
5. Create and fund a Homeless Ombudsman program.
6. Pass legislation that would accommodate undocumented people with housing and services.
7. Ensure that the local 40% share of 2163 funds sent to the state goes back to the local community.
8. Increase the LIHEP funding in proportion to increasing energy costs; dedicate a portion to homeless prevention and allow more local input into how funds are allocated.
9. Require state agency officials and staff to serve on local Continuum's of Care so they can become more involved in local homeless and housing issues.
10. Change DSHS Additional Requirements to reflect the actual need and not some arbitrary set amount.
11. Increase funding for the State IDA program and target the homeless.
12. Include consumers' voice in state policy decision by appointing them to positions on key state committees such as the Interagency Council on Homelessness.

ATTACHMENT 1 - DEFINITIONS

Affordable Housing

Defined as paying less than 30 percent an individual's income for housing.

At Risk of Becoming

Being on the brink of homelessness, often because of Homeless having extremely low income and paying too high a percentage of that income (typically 50 percent or more) on rent.

Beds

Typically used to describe overnight sleeping capacity in shelters.

Chronically Homeless

Also described as “hard to serve” homeless. Individuals who are homeless more than one year or more than three times in last three years; with disability.

Continuum of Care

A community plan to organize and deliver housing and services to meet the specific needs of people who are homeless as they move to stable housing and maximum self-sufficiency. It includes strategies to end homelessness and prevent a return to homelessness.

Domestic Violence

Patterns of coercive control in an intimate relationship. This control may be seen in physical assault or in more subtle, but equally devastating ways. Verbal, emotional, financial, and sexual abuse, as well as isolation, fall under the realm of abusive behaviors. Domestic violence crosses all racial, economic, ethnic, and religious communities.

Emergency Shelter

Short-term shelter for emergency situations (usually for 30 days, although it can be longer).

Homeless

According to the Stewart B. McKinney Act, 42 U.S.C. § 11301, et seq. (1994) a person is considered homeless who “lacks a fixed, regular, and adequate nighttime residence and; has a primary nighttime residency that is (A) a supervised

IV. REDUCE THE NUMBER OF HOMELESS YOUTH

PREVENTION STRATEGIES

Prevent homelessness among homeless youth

Activities:

Short-term

1. Encourage service providers to designate a youth point person and organize a contact list of point people in the community
2. Increase the number of street outreach professionals to meet current and future needs
3. Secure additional funding to expand Housing First opportunities for 50 individuals: cash assistance, transportation, utility support, communications, rent, intense case management and educational/job skill development

ATTACHMENT 1 - DEFINITIONS

publicly or a privately operated shelter designed to provide temporary living accommodations, (B) an institution that provides a temporary residence for individuals intended to be institutionalized, or (C) a public or private place for not designed for, or ordinary used as, a regular sleeping accommodation for human beings”.

Homeless Youth

An unaccompanied youth under the age of 18 and not emancipated.

Housing First

A Housing First approach rests on two central premises: Re-housing should be the central goal of our work with people experiencing homelessness, and by providing housing assistance and follow-up case management services after a family or individual is housed, we can significantly reduce the time people spend in homelessness. There are three components to this approach:

- **Crisis intervention, emergency services, screening and needs assessment:** Individuals and families who have become homeless have immediate, crisis needs that need to be accommodated, including the provision of emergency shelter. There should be an early screening of the challenges and resources that will affect a re-housing plan.
- **Permanent housing services:** The provision of services to help families access and sustain housing includes working with the client to identify affordable units, access housing subsidies, and negotiate leases. Clients may require assistance to overcome barriers such as poor tenant history, credit history and discrimination based on ethnicity, gender, family make-up, and income source. Providers may need to develop a roster of landlords willing to work with the program and engage in strategies to reduce disincentives to participate.
- **Case management services:** The provision of case management occurs (1) to ensure individuals and families have a source of income through

ATTACHMENT 1 - DEFINITIONS

employment and/or public benefits, and to identify service needs *before the move into permanent housing*; and (2) to work with families *after the move into permanent housing* to help solve problems that may arise that threaten the clients' tenancy including difficulties sustaining housing or interacting with the landlord and to connect families with community-based services to meet long term support/service needs.

Outreach

Developing relationships, providing service delivery and resources to homeless individuals who generally live on the streets or other unsheltered settings.

Permanent Supportive Housing

Involves permanent, affordable housing with support services as needed.

Serious Mental Illness (SMI)

Respondent has a major disorder (such as depression, psychosis, or manic episodes) and meets at least one of these additional criteria: (1) Functional limitation that limits major life activities, ability to work, or taking care of personal needs such as bathing; (2) Mental health (MH) services use or desire for MH services; (3) Danger to self or others; (4) Dependence, i.e., inability to support one's self or provide for one's own medical care.

Transition Shelter

Refers to shelter provided to individuals for up to two years.

Wraparound Services:

A delivery methodology in which multiple community-based services and supports emphasize the strengths of the individual/family and includes the delivery of coordinated, integrated, highly individualized unconditional services that addresses all of the needs of the individual/family in a comprehensive manner.

ATTACHMENT B

American Planning Association

Making Great Communities Happen

Policy Guide on Homelessness

Adopted by Chapter Delegate Assembly, March 29, 2003

Ratified by the Board of Directors, March 30, 2003

Denver, Colorado

Introduction

Before 1980, the United States did not experience widespread homelessness. Tonight, approximately 800,000 people will be homeless. This is despite a myriad of programs and organizations designed to address the problem, supported by nearly \$2 billion per year in federal investment. Over the course of a year between 2.3 million and 3.5 million people will experience homelessness.¹

Several factors have contributed to the rise in homelessness, including escalating housing costs since the 1980s that outstripped personal income growth; accelerated loss of affordable housing stock and declining rental assistance; and decreased affordability and availability of family support services, such as child care. Other social changes including deindustrialization of our central cities, suburbanization, and the resulting concentration of urban poverty, have created unsustainable communities and housing markets. Neighborhood disinvestment has further contributed to the substitution of underground markets, including the trade of illegal drugs, which have undermined families' and individuals' health and well being.²

Planners can play a significant role in reducing homelessness by determining local housing needs through their comprehensive plans, removing regulatory and legal barriers to the development of affordable and supportive housing, and fostering community support for permanent housing for the homeless. The lack of affordable housing severely limits a community's ability to end homelessness by limiting its ability to move people from shelters to permanent housing.

A planner's most fundamental responsibility is to improve communities by addressing existing and future needs. Section A-5 of the AICP Code of Ethics (as amended in October 1991) states that a planner "must strive to expand choice and opportunity for all persons, recognizing a special responsibility to plan for the needs of disadvantaged groups ..." The Code of Ethics further states that a planner must "urge the alteration of policies, institutions and decisions which oppose such needs."

This Policy Guide is another in a series of APA policy guides concerning housing related issues and builds on recommended policies APA has adopted in the following guides: Factory Built Housing (2001), Housing (1999), Community Residences (1997), The Supply of Public and Subsidized Housing (1991), and Smart Growth (2002).

I. Statement of Issues

What Is Homelessness? Federal law³ defines a homeless person as one who "lacks a fixed, regular, and adequate nighttime residence ... and has a primary night residency that is: (a) a supervised publicly or privately operated shelter designed to provide temporary living accommodations... (b) an institution that provides temporary residence for individuals intended to be institutionalized, or (c) a public or private place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings." Also included are persons being discharged from institutions that do not have an

identified residence to go to within a week, and persons fleeing domestic violence. The definition excludes those who are in the corrections system or detained pursuant to law. Various federal agencies other than HUD have interpreted the law in light of their specific programs; as reflected in program regulations.

This definition works well in large urban communities, where tens of thousands of persons are literally homeless, on the streets, or in shelters. It has proven problematic in assessing the status of homeless persons in rural areas where there are few shelters. In rural areas, homeless persons are more likely to live with relatives or friends in overcrowded or substandard housing, or in less-than-habitable outbuildings.⁴ Frequently these stays are sequential, that is, floating from one home to another until a permanent situation is found, these are the "Hidden Homeless."

It is neither accurate nor appropriate to think about the homeless as a relatively homogeneous group. The Millennial Housing Commission has adopted a general way of categorizing the homeless, based on the research of Randall Kuhn and Dennis Culhane, which provides a framework for considering how best to address and prevent homelessness:⁵

- **Transitionally homeless** persons are those who generally move quickly through the homeless assistance system, once they are able to access it. Their principal need is for housing, plain and simple. Income supports, including employment that pays a living wage is critical to keeping these families housed. The "transitionally homeless" include people that work in entry-level jobs as well as those living on fixed incomes (the elderly, for example, or persons with disabilities that are living on SSI), who earn barely enough to pay for their housing costs and other necessities (such as food, health care, and day care). These individuals and families often live paycheck-to-paycheck or month-to-month, and may be one paycheck away from not making their mortgage or rent payment. Thus, a single short-term emergency, such as an increase in their rent or the loss of a job because of layoff, illness, or injury may result in homelessness.
- **Chronically homeless** persons often experience long-term homelessness, frequently rotating through and among a community's various shelter facilities and the streets. They typically have health or substance abuse problems in addition to extreme poverty. This population is best served by permanent supportive housing, which combines housing with intensive rehabilitation, treatment, and other social services.

Who Is Homeless? High housing costs and precarious, low-wage employment leave many American families today only a paycheck, illness, or car breakdown away from homelessness.⁶ Families with children are one of the fastest growing segments of the homeless population. A 2000 survey of 25 cities conducted by the U.S. Conference of Mayors found that 36 percent of the homeless population was composed of families with children.⁷ This observation is corroborated by other research, which likewise indicates that approximately 34-38 percent of the homeless are families with children.⁸ In rural areas, families, single mothers, and children are the largest group of people who are homeless.⁹ Homeless children demonstrate serious developmental and learning delays, and are more likely to miss school than children with stable living situations. Poor educational experience can have lifelong impacts.¹⁰

About two-thirds of the households (50 percent of the people — including children) who experience homelessness over the course of a year are single adults. Most of these people are homeless for a very short time, and leave the homeless assistance system quickly. Others are perpetually homeless, cycling in and out of a variety of shelters, detention facilities, and the health care system.¹¹

Single homeless adults are most often men between the ages of 31 and 50.¹² Approximately 20-25 percent of this population experiences serious, ongoing mental illness.¹³ Approximately half of the single adult homeless have a past or present substance use disorder.

Runaway and "throwaway" youth are another element of the homeless population, and may include not only youth on the street or in shelters, but also students and children living in doubled-up housing, motels, and substandard housing, or "couch surfing" — the practice of ongoing but temporary stays with unrelated families or friends. This segment has proven difficult to quantify and

is often not included in official counts of homeless people. One study that interviewed homeless youth found that approximately 1.6 million individual youths nationwide were homeless at least one night over the course of a year.¹⁴

Why Are People Homeless? Homelessness results from a complex set of circumstances in which people are forced to choose between food, shelter, and other basic needs, such as medicine and preventive health care.¹⁵ Principal reasons for homelessness include:¹⁶

- **Poverty:** Eroding work opportunities and declining income for lower-level workers (such as janitors, restaurant workers, retail clerks and stockers, manual laborers), coupled with decreasing welfare benefits and rental assistance funding.
- **Unemployment and Underemployment:** Many people become homeless due to unemployment and underemployment. Even when people are employed, their salaries may not be adequate to afford decent housing or to allow accumulation of savings, living paycheck to paycheck. Many people that seek emergency and transitional housing are employed.
- **Lack of Affordable Housing:** Low-rent units are disappearing from the market — abandoned, demolished, or converted into more expensive housing. Costs of new construction continue to escalate, while deep subsidies that provide direct rental assistance to the poor are declining. Waiting lists for housing assistance average 33 months in the nation's larger cities.¹⁷ Despite recent moves to increase the minimum wage, in no state does a full-time minimum wage job enable most families to pay for a moderately priced two-bedroom apartment.¹⁸
- **Other Factors:**
 - **Domestic Violence** — Women with no means of support other than their abusive spouses are faced with a Hobson's choice: battering or homelessness. Forty-six percent of the cities surveyed by the U.S. Conference of Mayors reported domestic violence as a primary cause of homelessness.¹⁹
 - **Lack of Affordable Health Care**— Serious illness or disability can begin a descent into homelessness, beginning with loss of employment income and savings, which lead to eviction.
 - **Mental Illness and Substance Abuse** — Homeless people often face considerable barriers in obtaining treatment due to the lack of adequate resources, including mental health, substance abuse, outreach, and supportive services. Treatment failures occur when homeless people fall out of systems that do not aggressively maintain contact with them or when clients fail to comply with potentially effective medication/treatment regimens. With appropriate treatment and supportive services, the majority of people with mental illness and/or substance abuse issues can succeed in permanent housing. In turn, permanent housing can contribute to improved mental health and abstinence from alcohol or drugs.

What Is Being Done to Help the Homeless? The homeless assistance system is principally made up of local public and private nonprofit organizations that deliver a wide range of shelter and supportive services to people who become homeless. These services are generally funded through a patchwork of federal, state, and local public funds, coupled with charitable giving funneled through United Way and faith-based institutions. The aim of the homeless assistance system is to address the immediate needs of the homeless person and get them off the streets and into housing. Once housed, they may or may not receive additional direct services, depending on community resources and individual need.

On the policy front, the federal government is encouraging collaborative planning at all levels. Local service providers must engage in broad-based comprehensive planning for the homeless as a prerequisite for receiving federal homeless funding. The Interagency Council on Homelessness has brought federal agencies together to better coordinate the various programs that offer funding and services for the homeless. Several states have established similar interagency councils.

What Is the Cost of Homelessness? Because they have no regular place to stay, homeless persons use a variety of public systems in inefficient and costly ways. This tendency masks the true cost of homelessness by cost shifting to law enforcement, corrections, health care, welfare, education, and other systems. A recent study of nearly 10,000 homeless adults with severe mental illness in New York City found that they used an average of \$40,500 in health, shelter, and correctional services each year. For families, the annual cost of emergency shelter alone can be approximately \$30,000, and in some cities is as high as \$45,000 annually (New York).²⁰

II. Findings

Planning & Land Use

1. The need for emergency, transitional, and permanent housing for homeless populations is best evaluated with a Comprehensive Plan Housing Element that determines housing needs and priorities and sets forth policies and strategies to meet housing priorities.

2. Local comprehensive plans, in general, should be well integrated with the various plans and strategies that cities must develop in connection with federal housing and homeless funding, such as the Consolidated Housing & Community Development Plan, Continuum of Care for the Homeless, and Public Housing Agency Plan. The result can be ambitious plans that are possible to implement with access to grant funding, that identify appropriate sites and infrastructure for affordable and supportive housing.

3. Contributing to the shortage of affordable and supportive housing is an increasingly inadequate supply of appropriately zoned land (due to large minimum lot sizes for single-family housing and restrictions on siting multifamily or group residential facilities). Low-cost housing development fails to maximize profits for private developers and results in reduced tax revenues to local governments (when compared to more expensive forms of housing). Housing owned by nonprofit organizations may be exempt from local taxation while generating demand for school, infrastructure, and social services.

Supportive housing may be further restricted by covenants and special permitting requirements. Such permitting requirements may restrict the type and frequency of services provided on site, the proximity of the supportive housing to other similar projects, and imposes additional special limitations on density or number of units that exceed those of the zoning district classification.

4. The Continuum of Care planning process mandated by the U.S. Department of Housing & Urban Development as a prerequisite to receipt of funds has helped service providers evaluate community needs, identify gaps and duplication of services, and establish local priorities for use of grant dollars. The Continuum of Care approach, however, remains principally focused on helping communities frame an effective response to homelessness, rather than preventing homelessness in the first place.²¹

5. Planning for both immediate homeless services and prevention of homelessness requires that communities take a comprehensive view of how the social safety net does and does not work for both transitionally and chronically homeless persons. It is not enough to create a homeless assistance system that manages people's experience of homelessness. Communities need to address the root cause of homelessness. Since the homeless assistance system lacks the depth and stability of funding available to more "mainstream" programs and providers, effective planning will need to embrace mainstream programs and providers, such as Temporary Assistance to Needy Families, Community Health Centers, Public Housing Authorities, and Medicaid, to develop prevention strategies.

6. An evaluation of the Continuum of Care planning process mandated by the U.S. Department of Housing & Urban Development as a prerequisite for receiving funding indicates that more people are served and are able to access more and better coordinated programs. Further, a more coordinated approach to provide housing and services for homeless people offers a good framework for increasing communication and information sharing among key stakeholders including mainstream agencies and broadens the base for financial support in the homeless assistance network.

Note: The seven components, of a full Continuum of Care, are: prevention, outreach and assessment, emergency shelter, transitional housing, permanent supportive housing, permanent affordable housing, and supportive services.

Barriers to Affordable and Supportive Housing

7. Even when housing providers acquire, improve, or re-use existing housing stock and agree to payment in lieu of taxes to support local infrastructure, they typically encounter intense neighborhood opposition. Opposition to supportive housing in particular tends to be protracted, resulting in increased development costs for projects that already have extremely low margins of economic viability.
8. Spacing requirements for group homes can present barriers to the development of new permanent supportive housing for the homeless.²²
9. Development regulations, which impose unrealistic parking requirements and unnecessary transportation impact fees, may create financial burdens for developers of supportive housing when they are not reflective of the actual impact of the facility.
10. Despite evidence from numerous studies over the past 20 years, neighborhoods continue to vigorously fight supportive housing arrangements for the homeless on the basis of property values and/or a fear of crime. An Urban Land Institute Report prepared for HUD in 1999 examined the impact of supportive housing on neighborhoods and neighbors in Denver ("The Impact of Supportive Housing on Neighborhoods and Neighbors"). The report showed that supportive housing does not decrease property values nor increase criminal activity.²³

Fair Housing

11. Many homeless persons, particularly those most in need of permanent supportive housing, experience disabilities. Title II of the Americans with Disabilities Act (ADA)²⁴ states "no qualified individual with a disability shall, by reason of such disability, be excluded from participation in or be denied the benefits of the services, programs, or activities of a public entity, or be subjected to discrimination by any such entity." The Supreme Court decision in *Olmstead v L.C.*²⁵ interpreted Title II by requiring public entities to administer services, programs, and activities in "the most integrated setting appropriate to the needs of qualified individuals with disabilities." In essence, *Olmstead* bans the "separate but equal" approach to accommodating the disabled. Although this decision has yet to be applied in a land use context, it certainly raises the issue of whether a community, in restricting zoning or permitting for supportive housing in a manner that limits the supply of such housing, violates the ADA.
12. One consequence of the reasonable accommodations provision of the Fair Housing Act is that local jurisdictions cannot limit the number of homeless persons with disabilities who live in supportive housing, such as group homes. Organizations such as Oxford House have fought and won zoning disputes concerning single-family definitions that limited the number of disabled persons that could live in a group home.
13. Local governments can violate the Fair Housing Act if they stop a group home or deny a reasonable accommodation due to neighbor's fears or prejudices about persons with disabilities.²⁶

Housing Costs & Supply

14. Families and individuals at the lowest end of the wage scale have the greatest difficulty in finding and paying for decent housing. These same households are important to community stability and economic growth, as they are typically headed by workers in the service and retail sectors with earnings at or just above minimum wage. Other at-risk households in many communities include entry-level police officers and teachers, as well as low-skilled manufacturing workers.²⁷
15. The inventory of affordable housing units keeps shrinking. The absence of a range of viable rental housing options creates a truncated housing continuum. This affordable rental housing crisis

is not new; however, the plight of homeless and poor households has intensified as the gap between minimum wage and the wage a full-time worker must earn an hour to afford adequate housing has increased sharply. The national median housing wage for 2002 was \$14.66 for a two-bedroom apartment or almost three times the Federal minimum wage, which has remained at \$5.15 since 1997. According to the National Low Income Housing Coalition, in no jurisdiction in the United States does a minimum wage job provide enough income for a household to afford the Fair Market Rent for a two-bedroom home.

16. The lack of affordable housing has engendered high rent burdens. Housing assistance is at a premium. People are placed on long waiting lists. The average time on the waiting list for Section 8 rental assistance is approximately 33 months. These exceedingly long waiting lists mean that people must remain in shelters longer. The loss of single room occupancy housing has also contributed to the growth of homelessness. According to the 2000 "Survey on Hunger and Homeless in America," a report of the U.S. Conference of Mayors, single men compose 44 percent of the homeless, and single women make up 13 percent.

Fiscal Impacts of Homelessness

17. Homeless persons are more likely to use the most expensive health care interventions, such as emergency rooms. Homeless people spend on average four more days per hospital visit than comparable non-homeless people, at a cost of approximately \$2,414 per hospitalization.

18. Homelessness frequently results from and aggravates serious health care problems, including addiction. Attempts to treat people who do not have stable housing are ineffective and costly.

19. Homeless persons spend much time in jail or prison, often for petty crimes. It is not unusual for homeless people to continue to commit minor offenses so that they can return to the relative safety and warmth of a jail cell. The typical cost of a prison bed in a state or federal facility is \$20,000 per year, compared to a typical annual rent subsidy of about \$4,500-\$6,000. Compromised health and time in jail limit homeless people's employability, and create long-term reliance on welfare systems.

20. Emergency shelter is the most immediate and basic response to homelessness. However, emergency shelter is the least cost-effective approach to solving the need for long-term housing. With an average annual cost of \$15,000 for singles and \$25,000-\$30,000 for families, emergency housing is far more expensive and less effective than the typical annual rent subsidy of \$4,500-\$6,000 per unit.²⁸

III. Specific Policy Positions

1. Planners should work to ensure that local comprehensive plans include housing elements that provide for a diverse choice of housing opportunities, in all price ranges, distributed throughout the community and for inclusion of appropriate types of supportive housing in amounts consistent with demonstrated need. Local Planners should encourage the specific subject of homelessness in local comprehensive plans. This can be done as part of the housing element and can be tied to affordable and attainable housing as goals and recommend the homeless be considered as part of any "special needs" audience that may be identified in a local plan.

Reason to support:

Planners can reduce homelessness by using the Housing Element of the Comprehensive Plan to determine housing needs and to develop effective strategies to address identified housing issues, including homelessness.

2. Local Planners should encourage coordination between the general planning/land use departments with community development and/or human service funding agencies and nonprofits.

Specifically, planners should identify and cross reference common goals or related objectives in local land use plans with federally mandated housing and community development plans and strategies (i.e.: HUD Consolidated Plans, Neighborhood Revitalization Strategies, and Continuum of Care Strategies.)

Reason to support:

Coordination promotes the efficient use of public funds. The coordination of planning efforts provides a platform for addressing housing needs strategically, with an integrated vision that guides, connects, and communicates a more comprehensive effort. This effort may promote equity by offering a continuum of supportive housing options.

3. Planners should ensure that local comprehensive plans address the need for a wide array of emergency, transitional, and permanent housing to serve the homeless, including rental units for households with incomes below 30 percent of area median income (See APA Policy Guide on Housing, 1999).

Reason to support:

Unless there is an adequate supply of housing to meet the needs of very low-income households, including those with disabilities, communities will not be able to effectively address homelessness.

4. Planners should work to ensure that every community has reasonable facilities to accommodate the needs of the homeless on a short-term or emergency basis.

Reason to support:

Emergency shelter should be considered a basic community service. In the wealthiest nation on earth, there is no excuse for people to perish from exposure, but it happens across the nation every day. Short-term shelters get people off the streets and offer the opportunity to access supportive services that can help them to overcome the circumstances and barriers in their lives that prevent them from securing and maintaining permanent housing situations. A shelter is not intended to become, nor should it be a long-term solution to homelessness, but a humanitarian measure that in the interest of public health offers basic protection from harm.

5. The American Planning Association and its Chapters should take a leadership role in educating planners and local government officials about the fair housing implications of local land use regulation.

Reason to support:

Zoning and subdivision regulations may contain measures that conflict with federal protections under the Fair Housing Act. Among the most common problems are ordinances restricting the number of unrelated individuals who may occupy a residence, standards for development that unduly restrict access by protected classes, and restrictions on supportive services provided within a residential unit. Planners and local governments must become more knowledgeable about the Fair Housing Act and its connection with land use to ensure that all citizens have equal access to appropriate, affordable housing.

6. The American Planning Association, its Chapters, and its Divisions (especially the Planning and Law Division and the Housing and Community Development Division) should collaborate to produce materials and promote activities to identify and remove barriers to affordable housing.

Reason to support:

Homeless individuals and families need affordable and supportive housing. Local planners and planning commissioners need more training about affordable housing, supportive housing, and fair housing laws to create better planning decisions at the local level. They must be given the tools to appropriately evaluate proposals, starting with a review of zoning and subdivision regulations that may present barriers to affordable housing. An understanding of fair housing law can assist local planners in making proper decisions.

7. The American Planning Association, its Chapters, and its members should partner in educating planning commissioners and elected officials concerning the need for diverse housing types to serve the homeless and non-homeless special needs populations and provide tools to better evaluate housing proposals.

Reason to support:

APA should oppose neighborhood efforts to thwart housing for the homeless and non-homeless special needs populations on the basis of prejudices and fears concerning property values. APA should assist Planning Commissioners and elected officials with tools to objectively evaluate affordable housing and supportive housing proposals (e.g., Building Better Communities Network resources).

8. The American Planning Association and its Chapters support Federal, State, and local efforts to streamline existing programs and lower barriers to producing and preserving affordable housing and support efforts that provide incentives to increase the supply of affordable rental housing.

Reason to support:

As noted in the Millennial Housing Commission Report, in 1999 one in four households — an estimated 28 million — spent more than 30 percent of their income on housing, and one in eight low-income working families earning the equivalent of a full-time, minimum wage reported spending more than one-half of their income on housing. It is estimated that 1.7 million poor households live in substandard housing. Government at all levels should use the tools at their disposal to promote infill incentives, property tax abatement, density allowances, land assembly, and fast track permitting.

9. The American Planning Association and its Chapters should promote federal leadership in ending homelessness including increased and direct aid to states cities and localities, including coordination of federal efforts through the Interagency Council on Homelessness, funding for supportive services, and increased commitment to affordable, permanent housing.

Reason to support:

Federal support for homeless programs continues to be vital. Increased interagency coordination has resulted in better, more streamlined approaches to funding for homeless services and permanent housing, while emphasizing local determination in how programs are designed and delivered. Federal resources will continue to be critical in meeting the demand for the permanent housing that is needed by special needs populations, but cannot be built entirely without some sort of federal subsidy.

10. The American Planning Association and its Chapters support the establishment of a National Housing Trust Fund to serve as a source of revenue for the increasing the affordable rental-housing inventory (See APA Policy Guide on Housing, 1999).

Reason to support:

Federal support for the housing sector has been uneven, especially, in addressing the affordability challenge confronting many lower-income households. The affordable housing crisis severely affects extremely low-income families earning at or below 30 per cent of area median income. The proposed National Affordable Housing Trust Fund focuses specifically on targeting these low-income households. The Trust Fund should be used primarily for the production of new housing, preservation of existing federally assisted housing, and rehabilitation of existing private market affordable housing. Trust Fund dollars can be used to ensure economic integration, such as the production of new, mixed income housing. Legislation has a real goal of 1,500,000 housing units by 2010.

11. The American Planning Association and its Chapters support the establishment of State, Regional, and/or local housing trust funds with a permanently dedicated source of public revenue to support the production and preservation of affordable housing.

Reason to support:

There are over 150 housing trust funds in the United States. Recent statistics indicate that more than \$500 million has been invested in affordable housing via these trust funds every year. These funds support a variety of housing activities that target homeless, low, and very low income households including new construction, preservation of existing housing, homeless shelters, housing-related services, and capacity-building for nonprofit housing organizations. These housing trust funds successfully demonstrate government's commitment to finding a solution to the nation's critical housing needs. Documented economic benefits of Housing Trust Funds include more employment opportunities, higher property tax revenues, and increased sales taxes.

12. The American Planning Association should join with the U.S. Conference of Mayors, the National Alliance to End Homelessness, the Corporation for Supportive Housing, the National Coalition for the Homeless, and the National Law Center on Homelessness and Poverty to encourage federal, state, and local interagency collaboration to end homelessness.

Reason to support:

Good planning requires close cooperation of all levels of government. APA's voice alone is not sufficient to carry this message; partnership with other organizations will allow the planning agenda to demonstrate a broad base of support.

13. To implement the foregoing policies the American Planning Association and its Chapters recognize that some small fully developed communities may need intergovernmental agreements with adjacent or larger communities in meeting these needs.
